92-day ban on non-BS6 vehicles in Delhi! Entry of outside registered vehicles banned from 1 November 2026 to 31 January 2027

**Parivahan
Vishesh News**

GRAP-1 implemented at AQI 244, CM Rekha Gupta's Winter Action Plan - No PUC No Fuel, parking doubled, 50% WFH

Presenter Pinki kundu Social Counselor

Facts at a Glance - From Verified Government Source*-

Duration: From 1 November 2026 to 31 January 2027 (Total 92 days), Winter Action Plan till 28 February 2027- *Order:* Chief Minister Rekha Gupta announced on 20 October 2026, CAQM implemented GRAP-1 on 21 October at AQI 244- *Who is affected:* Non-BS6 vehicles registered outside Delhi - BS4 and older petrol (older than 15 years), diesel (older than 10 years), old commercial vehicles BS3/BS4 trucks, tempos- *Who is exempted:* CNG vehicles, Electric Vehicles (EV), Ambulance, Fire, Police, emergency services and other categories notified by Environment Department- *Enforcement:* Checking at Delhi borders, PUC check through ANPR at 500+ petrol pumps, parking charges doubled in MCD (exemption for metro

parking), MCD office 8:30-5:00, Delhi Government 10:00-6:30, 50% Work From Home *Detailed Analysis - Rules, Laws, Acts, Orders* *1. Legal Basis:* Under Section 3 of Environment (Protection) Act 1986, power of Central Government to give directions for pollution control.- Commission for Air Quality Management (CAQM) Act 2021 - Supreme authority for air pollution control in Delhi-NCR, right to implement GRAP.- Under Section 115 of Motor Vehicles Act 1988, right of State Government to ban entry of vehicles on basis of pollution.- Supreme Court Order: In meeting of 17 October 2026, CAQM decided as per SC order that from 1 November only BS-VI, CNG, LNG, electric goods vehicles will get entry in Delhi *2. What is GRAP:* Graded Response Action Plan in 4 stages - GRAP-1 (AQI 201-300), GRAP-2 (301-400), GRAP-3 (401-450), GRAP-4 (450+)- New arrangement this time - Every year mandatory winter curfew from 1 November to 28 February, no waiting for AQI, preparation in advance. From 2023-24 to 2025-26, average AQI in this period was 312-342. *3. What is BS6 and why:* BS6 standard mandatory in India from 1 April 2020, reduction of 68% in NOx and up to 80% in PM compared to BS4. Vehicles purchased

before 1 April 2020 are generally BS4 or older.- In Delhi already End-of-Life rule - ban on Delhi registered vehicles after petrol 15 years, diesel 10 years. This new rule is additional for outside vehicles. *4. No PUC No Fuel Rule:* Without valid PUC, petrol, diesel, CNG, LPG will not be given. On violation, fine up to Rs 10,000 under Motor Vehicles Act, fine up to Rs 20,000 on BS6 violation and action of vehicle tow/impound.- Checking through Automatic Number Plate Reader (ANPR) at 500 pumps. *5. What to do in public interest:* Before travel check BS standard on RC of your vehicle, keep PUC valid.- Get conversion to CNG done with valid sticker, give priority to EV.- Use carpooling, metro, electric bus, last mile connectivity.- Transporters - AIMGTA has demanded 15-day pilot, because ban on heavy trucks will increase transshipment cost, jam will increase - appeal to administration to implement in phased manner. *Conclusion: This information is based on media reports, wait for final government notification. Confirm applicable rules, exemptions and conditions only from official website of Transport Department, Delhi. Clean air is everyone's right - Our Delhi, Our Responsibility. Kundu Social Counselor

Ban on Non-BS6 Vehicles in Delhi - Public Interest Information

BS6 Approved ✓

1 November 2026 to 31 January 2027 • Entry Ban for Non-BS6 Vehicles Registered Outside • Applies at Delhi Borders

Duration • Total 92 Days

AQI 244 • GRAP - 1 Implemented
Delhi Air Quality: Very Poor
 Winter Pollution Control

Which Vehicles Are Affected?

- BS4 Petrol Vehicles - Older than 15 years
- BS4 Diesel Vehicles - Older than 10 years
- Old Commercial Vehicles - BS4/BS3 Trucks, Tempos

Who Is Exempt - Exempt Vehicles

- Ambulances - Emergency Services
- Government Vehicles - Central/State Government
- CNG Vehicles - With Valid With Valid CNG Sticker
- Electric Vehicles (EV) Fully Exempt
- BS6 Vehicles Registered in Delhi

Rules & Action

- No PUC → No Fuel: At 500+ Petrol Pumps via ANPR Monitoring
- Parking Fee Doubled: At All MCD Parking Lots
- 50% Work From Home: Advisory for Government/Private Offices
- Enforcement: Delhi Police + Transport Department • Violation: ₹20,000 Fine + Vehicle Towed/Impounded

Transport Special Newspaper • Issued in Public Interest
October 2026 Edition
 Delhi Government • Transport Department • Environment Department Source: CM Rekha Gupta - Winter Action Plan 2026 | CAQM GRAP Guidelines | Public Interest Notice

Parivahan Vishesh Newspaper - Learning Licence Special

Parivahan Vishesh News

Learning Licence exam will have identity through Face Authentication — 'Jugaad' will not work now

Now only the applicant can give the exam, camera surveillance, face authentication and secure browser implemented on Sarathi portal

— Pinki Kundu, Co-Editor, Parivahan Vishesh

This step is a big reform towards road safety. When applicant himself learns rules and gives exam, only then accidents will reduce.

What is role of agent now? Agents will be able to help only in filling form, will not be able to give exam. On being caught, application cancelled and legal action.

Facts at a Glance

- What will change: Now face authentication mandatory in online exam for Learning Licence

- Where: On Sarathi portal

<http://sarathi.parivahan.gov.in> STALL (Sarathi Test for All Learner's Licences) system

- Technology: Aadhaar based face scan + Live camera monitoring + Secure Exam Browser + IP limit

- Objective: To stop proxy/placeholder exam, to ensure real knowledge of traffic rules

Main Points

1. Jugaad closed now: Earlier many times taking Aadhaar OTP agent or another person used to give exam, now identity will be ensured with live face match.

2. Rule of 5 attempts: On face verification failing maximum 5 attempts, then will have to go to RTO.

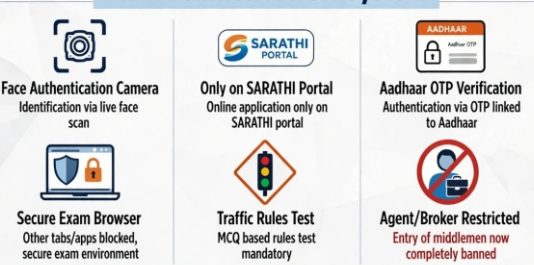

3. AI proctored monitoring: Camera on for whole time, exam auto cancelled on suspicious activity, only 2 candidates per day from same system/IP.

4. Lesson from Maharashtra: * In Maharashtra

October 2026 | Transport Special Newspaper | Learning Licence Special

Learning Licence Exam Now With Face Authentication - No More Proxy Tricks
 Only the applicant can give exam - Camera monitoring, Secure Browser

Main Features of New System

New Process - Step by Step Details

Important: Now only those candidates who applied themselves can appear in exam. Application cancelled and legal action if placelider/proxy caught.

Publisher: | Pinki Kundu | Co-Editor, Parivahan Vishesh Sanjay Kumar Bathla | Chief Editor

Issued: Transport Department, Govt of India • Applicable from October 2026 • More info: <https://sarathi.parivahan.gov.in>

proposal came to temporarily stop faceless service due to misuse, because cases of tampering in Aadhaar data and proxy tests were found.

New Process — Stepwise

1. Application with Aadhaar Authentication on Sarathi, OTP verification

2. Live face scan — matching with registered Aadhaar photo

3. In secure browser 15-20 MCQ (traffic signs, rules) — passing 60% (9-12 correct)

4. As soon as pass, Form 3 Learning Licence PDF immediate download

Logistics: New Career and Employment Opportunities for Youth

Parivahan Vishesh news

In today's rapidly changing economy, logistics has emerged as one of the most important sectors for economic growth, trade and employment generation. The expansion of e-commerce, online shopping, manufacturing, international trade and digital services has significantly increased the demand for efficient transportation, warehousing and supply chain management. For young people seeking promising career opportunities, the logistics sector offers diverse employment options, professional growth and opportunities for entrepreneurship. Logistics refers to the planning, movement, storage and delivery of goods from their place of origin to the final consumer. It includes transportation by road, rail, air and sea, inventory management, packaging, warehousing, order processing and delivery services. An efficient logistics system ensures that products reach the right destination at the right time and at an appropriate cost. It is the backbone of modern commerce and industry. ## A Rapidly Expanding Sector India's growing economy, expanding infrastructure, increasing manufacturing activity and booming e-commerce industry have created new opportunities in logistics. Online shopping platforms, supermarkets, pharmaceutical companies, automobile manufacturers, food processing industries and retail businesses all depend on effective supply chains. The development of highways, freight corridors, ports, airports, logistics parks and multimodal transport facilities is further strengthening the sector. Government initiatives promoting infrastructure development, digitalisation and manufacturing have also increased the importance of logistics professionals. The growing need for faster deliveries, better inventory control and cost-effective transportation means that skilled workers are required at every stage of the supply chain. Consequently, logistics is no longer limited to drivers,

warehouse workers and delivery personnel. It has become a technology-driven industry requiring trained managers, analysts, engineers and digital specialists. ## Diverse Career Opportunities One of the biggest advantages of the logistics sector is the wide range of careers it offers. Young people can choose employment according to their educational qualifications, interests and skills. 1\ Supply Chain Management: Supply chain professionals coordinate purchasing, production, storage and distribution. They help organisations maintain the smooth movement of goods and minimise operational costs. Graduates in business administration, commerce and supply chain management can explore this field. 2\ Transportation and Fleet Management: Transportation managers plan delivery routes, supervise vehicle operations, monitor fuel consumption and ensure timely deliveries. Knowledge of transport regulations, route optimisation and fleet-tracking technology is useful for these positions. 3\ Warehouse and Inventory Management: Warehouses are essential for storing products before distribution. Warehouse supervisors, inventory controllers, stock managers and operations executives ensure that goods are stored safely and dispatched efficiently. Knowledge of inventory software and warehouse automation can improve career prospects. 4\ E-commerce and Last-Mile Delivery: Online shopping has created employment in order fulfilment, dispatch operations, delivery coordination, returns management and customer service. These roles are available at different skill levels and can provide entry points for young job seekers. 5\ International Trade and Freight Forwarding: Import-export companies require professionals who understand shipping procedures, customs documentation, cargo handling and international trade regulations. Courses in international business, logistics and foreign trade can be beneficial. 6\ Technology and

Data Analytics: Modern logistics increasingly uses artificial intelligence, GPS tracking, automated warehouses, robotics and data analytics. Professionals who can analyse transportation costs, forecast demand and improve delivery efficiency are becoming increasingly valuable. ## Educational Qualifications and Skills The logistics sector offers opportunities to school leavers, diploma holders, graduates and postgraduate students. Entry-level jobs may be available to candidates with basic educational qualifications and practical training. Diploma and certificate programmes in logistics, transportation, warehousing and supply chain operations can help candidates acquire industry-relevant skills. Graduates in commerce, management, engineering, information technology and economics may pursue specialised courses or postgraduate programmes in supply chain management and logistics. Vocational training and apprenticeships can also provide practical experience. Apart from formal qualifications, communication, teamwork, problem-solving, time management and decision-making are essential. Digital literacy is particularly important because many companies use specialised software to track shipments, maintain inventory and manage orders. ## Entrepreneurship and Self-Employment Logistics also provides opportunities for young entrepreneurs. Small businesses can explore local delivery services, transport coordination, packaging, courier franchises, warehouse support and specialised distribution services. Entrepreneurs may also develop digital platforms connecting transport operators with businesses. However, starting a logistics business requires careful planning, market research, financial management and compliance with applicable regulations. Young entrepreneurs should begin on a manageable scale and gradually expand as their experience and customer base grow. ## Challenges and the Way

Forward Despite its promising future, the sector faces challenges such as long working hours in some roles, infrastructure gaps, operational costs, worker safety concerns and pressure to deliver goods quickly. Automation may also change certain traditional jobs, making continuous skill development essential. Educational institutions, training centres and employers should work together to provide practical training, internships and industry-oriented courses. Greater attention must be given to workplace safety, fair wages, professional certification and career progression. Young people should verify the credibility of training institutes and employment offers before investing money in courses or recruitment services. ## Conclusion The logistics sector offers young Indians an opportunity to build careers in a field that directly supports economic development. From transportation and warehousing to international trade, management and advanced technology, its employment possibilities are extensive. With the right education, practical experience, digital skills and willingness to learn, young people can find meaningful employment and progress towards leadership positions. For those with entrepreneurial ambitions, logistics also offers opportunities to establish independent businesses. Logistics is no longer merely about moving goods from one place to another; it is about connecting markets, strengthening businesses and creating careers. With appropriate training and effective planning, this expanding sector can become an important source of employment, professional growth and economic opportunity for India's youth.

Given the continuous support and cooperation that Parivahan Vishesh Newspaper has received from all of you over the past three years, and considering its growing role in amplifying your voice day by day, the management of Parivahan Vishesh Newspaper and Transport Vishesh News Limited have decided to launch the public's own channel, '**Parivahan Vishesh News Doordarshan**,' from the month of October. The objective of this initiative is to deliver public interest news, public welfare information, public awareness, and important updates more rapidly and effectively to the Government of India, various State Governments, and all political organizations before anyone else.

Get Ready — We're Coming Soon!

PARIVAHAN VISHESH NEWS DOORDARSHAN

Great News! Now your voice will resonate across the entire world. After 3 successful years of the Parivahan Vishesh Newspaper—now, a new revolution!

We hope that just as you have supported and contributed to taking "Parivahan Vishesh Newspaper" to great heights in today's era, in the same way, you will continue to support "Parivahan Vishesh News Doordarshan," which is being launched to become the voice of the people, and help us make it the world's largest news.

Take special care of these things in Diabetes (Sugar)!

When will we be free from the growing terror of noise?

October 2026 | Transport Special Newspaper Health Special

Take Special Care of These Things in Diabetes (Sugar)!

Medicines are important but caution is also necessary - Do not increase dosage without doctor's advice.

Possible Side Effects of Medicines (7 Main)

Hypoglycemia

Dizziness • Sweating • Tremor • Unconsciousness

Stomach Problems

Nausea • Vomiting • Diarrhea • Metformin

Weight Gain

Insulin

Liver Effect

Jaundice

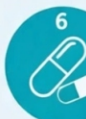

Kidney Problems

Dosage change needed

Liver Effect

Jaundice

Vitamin B12 Deficiency

Weakness • Tingling

Heart Precautions

Heart

Essential Precautions (5 Points)

Take medicine on time

Regular blood sugar check

Balanced diet and exercise

HbA1c and kidney check from time to time

Do not stop medicine suddenly

Pinky Kundu | Social Counselor Sanjay Kumar Bathla | Chief Editor

Important Advice: Consult a qualified doctor before starting, changing or stopping any medicine.

This information is for awareness only. Contact your doctor for medical advice. | October 2026

Parivahan Vishesh News

Pinki Kundu Social Counselor

Medicines are important to keep Diabetes under control, but precaution is equally important!

Increasing dosage of medicines or taking them in wrong way without doctor's advice can be harmful.

Possible side effects of Diabetes medicines

1. Very low blood sugar (Hypoglycemia)
 - Dizziness
 - Sweating
 - Shaking of hands
 - Unconsciousness in serious condition

2. Stomach related problems
 - Nausea or vomiting
 - Diarrhea
 - Stomach pain

These problems can occur due to some medicines, like Metformin.

3. Weight gain Weight can increase due to some Diabetes medicines and Insulin.

4. Kidney problem If kidney function decreases, dosage of some medicines may have to be changed. Therefore regular checkup and doctor's advice is necessary.

5. Effect on liver Some medicines can affect liver. As per need doctor can advise to get liver checked.

6. Vitamin B12 deficiency Due to taking Metformin for long time, some people may have Vitamin B12 deficiency.

Due to this weakness, fatigue and tingling in hands and feet can occur.

7. Heart related precaution Side effects of some medicines depend on person's health condition and other medicines. Therefore always do treatment with doctor's advice.

What precautions to take in Diabetes?

- Do not increase dosage of medicine without doctor's advice.
- Take medicines at prescribed time.
- Check blood sugar regularly.
- Take balanced diet and do regular physical activity.
- Get HbA1c and kidney checked as per doctor's advice.

Important Advice

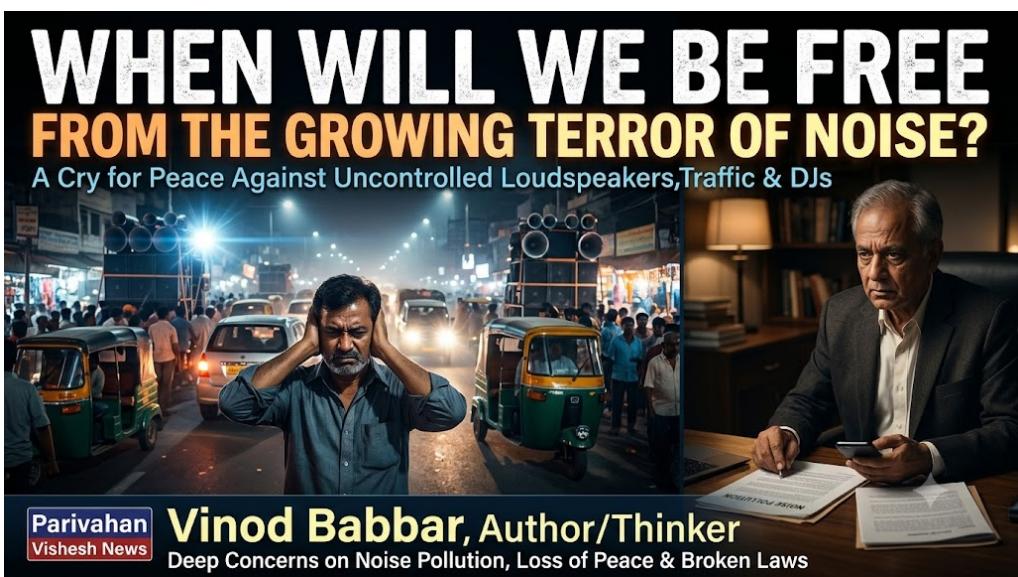

- Do not stop Diabetes medicines suddenly on your own.
- Do not take more medicine than prescribed amount.

Take advice from doctor before making any change in treatment.

Parivahan Vishesh News

Vinod Babbar

The sudden news that hundreds of music systems were confiscated in Jabalpur, banning bass music systems, shocked everyone. Another piece of information related to rail travel is that the Indian Railways has implemented strict rules against loud music, videos, reels, or conversations on mobile phones in trains and at railway stations. Violations of these rules are punishable by heavy fines, and in serious cases or disputes, punishment. During my foreign travels, I've experienced that as soon as the volume becomes too high, fellow passengers stare at you and immediately complain to the passenger waiting to hear the passenger. Now, it remains to be seen whether the new railway rules are actually implemented or will remain confined to the law book. Who wouldn't remember singer Sonu Nigam's tweet about being woken up by the morning Azaan (call to prayer) and a much-discussed announcement by a fundamentalist leader of a "10 lakh reward for anyone who shaves their head"? At the time, much was said for and against this comment, and Sonu Nigam clarified, "My statement is being misrepresented. I believe that loudspeakers should not be installed at religious places. Making noise in the name of religion is hooliganism." Similar comments are made about the very loud DJs used in religious processions, whose deafening noise causes vibrations in nearby buildings. There are even reports of window panes shattering in some places due to the earthquake-like vibrations. Hardly anyone would disagree that noise, despite its invisibility, has become a significant problem today. Noise is not only harmful to the ears but also to buildings. The sound of utensils falling in homes, along with the earthquake-like sensation, can cause increased heart rate. Yet, sadly, noise pollution is not even discussed adequately. Despite being mentally irritated and disturbed by uncontrolled noise, most people remain silent, fearing they will be mistaken for communal, irreligious, or atheist. Undoubtedly, every religion and sect has the right to propagate its message. They cannot be prevented from using loudspeakers in their programs, but they can certainly be requested to limit the sound of loudspeakers to the venue or building where the program is taking place. Because no sensitive person or organization advocates causing harm to others. Those individuals or organizations who are unwilling to heed any advice on noise control are perhaps unable to properly understand or define the difference between religion and ostentation. Hundreds of years ago, Kabir emphatically declared: By collecting pebbles and stones, a mosque was built. So the Mullah climbed up and gave the call to action, God became deaf. It is important to understand here that Kabir does not speak out against any one form of

ostentation. He raises his voice equally against the ostentation of every religion and sect. Recently, the melodious hymns and songs of a massive Bhagwati Jagran quickly turned into deafening noise. On top of that, a massive generator continued to play its harsh "Sona Mana Hai" tune all night, distributing headaches and irritability. Sleep was out of the question due to this all-night chaos. The terrible headache and restless mind continued to make me restless the next day. This isn't just my problem. In almost all cities and metropolises, voices are growing against the noise of vehicles, the blaring of horns, and the noise of loudspeakers played at festivals, election rallies, rallies, and processions, not just religious places. A friend laments, "Years ago, when we bought a house on a wide road, everyone acknowledged our foresight. After all, we needed ample space in front of our house for every joy and sorrow. Parking on a wide street wasn't an inconvenience, but within a few days, our foresight turned into a problem, as the noise of vehicles day and night made our lives miserable. Seeing the open space, others set up tents right in front of our house and held their events. The joys of others became a source of sorrow for us, as the daily loud DJ music, drums, and fireworks, along with the sounds of dancing and singing, began to disturb our sleep. If we spoke, we were met with rebukes like, "It's just for one night," "If you can't even adjust to this, how can you be social?" But who could explain to them that for them, it was just for one night, while for those suffering, it was a nearly daily story. After all, how could they survive? What should the elderly and sick do? How could students study?" Where can I go to get some sleep? Can I stay calm without sleep? If not, what should I do? Another victim laments, "There is noise everywhere. Loud DJs and TVs were enough to disturb the peace. But the problem worsened when a barber shop opened right in front of our house, where a tape recorder would play loudly from early morning. When repeated requests failed to yield any solution, we struck a deal with the barber salon owner to play the

tape recorder at low volume for two hours in the morning and evening. I regularly pay 'Jizya' for this favor. After all, this is not a high price for peace." There are numerous rules and regulations against noise pollution, which our courts repeatedly issue stern warnings against. There are also provisions for confiscating loud vehicles, generators, machines, and decks. Yet, why is there no relief from noise? Is the convenience fee blindfold and the cotton wool in the ears the only reason, or is there something else? Is this the reason why people don't bother to complain? Perhaps because of this fearlessness, even street vendors and hawkers in cities have started using pre-recorded loudspeakers. Therefore, in cities and metropolises, it is not the sweet cooing of the cuckoo or the pleasant chirping of other birds that dominates, but the discordant noise produced by various loudspeakers and vehicles. The question of how religious it is to play loudspeakers at deafening volume at social and religious gatherings like weddings is a must, because the noise disturbs not only children, the sick, and the elderly, but even healthy people returning home after a hard day's work. They become irritable, their blood pressure rises due to stress, their ears become deaf, and a variety of health problems arise. Some argue that prayers, azaan, and ardaas are auspicious for everyone, and therefore, loudspeakers are the only effective medium to reach as many people as possible. Therefore, objecting to their use could harm religious harmony. Can such arguments be accepted? Almost all religions and sects maintain that religious matters should not be shared with unworthy or unwilling individuals. Isn't it a disrespect to religion to recite these words to those who do not believe in them? According to the Quran, "Lakum Deenukum, Waliya Deen!" Your religion is for you, and our religion is for us. If someone believes in another religion, how can it be justified to force them to follow our own? When we recite the Azaan or recite Tarawih on loudspeakers, aren't we forcing our views on people of other religions? Similarly, in the

18th chapter of Shrimad Bhagavad Gita, verses 67-68, it is said -Idam te natapaskaya nabhaktaay kadachan. Neither Chashusrushwe Vachyam nor Cha Maa Yobhyasuyati. That is, this secret of the Gita should not be revealed to someone who lacks the patience to listen to it, or who is showing devotion to it for some selfish purpose, or who is simply unwilling to listen. But when we use loudspeakers to preach religious sermons at festivals, don't they reach the ears of those who disbelieve in Hindu events or who find some flaw in them due to noise or other reasons? In the next verse, Lord Krishna says, "O Arjuna, those who truly believe in me share these teachings of mine only with my devotees." St. Luke of Christianity wrote something similar in his Gospel: "If, while preaching your religion, you reach a village where the people oppose you or dislike you, dust off your shoes there and move on." Undoubtedly, religion and spirituality share a deep connection. They cannot be remotely connected to ostentation. In reality, religion is our individuality, a means of leading our lives toward peace, contentment, and purity, leading to excellence. But this does not necessarily grant us the right to disturb others. If we cause even the slightest pain to anyone, we should consider whether we are on the right path. Religion is not self-centered or selfish, but rather a path of wishing for the well-being of all. Therefore, understanding the true nature of religion, it is not appropriate to shy away from or find excuses to protect our surroundings from all forms of pollution. Religious processions should certainly take place, but the tradition of loud music systems should be abolished. If this is not done, it is natural to question whether the administration and the organizations that organize such processions are waiting for some major disaster to occur. Enough is enough; now a clarion call must be given against all forms of noise that disturb the peace of society.

Three IITs Bring Medical Science and Engineering Together: The Mission to Develop Medical Engineers

Parivahan Vishesh News

Dr. Vijay Garg

Modern medicine is becoming increasingly dependent on technology. Hospitals today rely on CT scans, MRI, artificial intelligence (AI), robotics, biosensors and advanced diagnostic equipment. As medical technology continues to evolve, the need for closer collaboration between medicine and engineering has become more important than ever. In this direction, the Indian Institutes of Technology (IITs) at Madras, Kharagpur and Kanpur are working to bring medical science and engineering together. Their aim is to develop specialists who understand both the functioning of the human body and the technology behind modern medical equipment. Why Is Collaboration Between Medicine and Engineering Necessary? Imagine a patient undergoing a CT scan, but a portion of the resulting image appears blurred. The doctor may find it difficult to determine whether the problem is caused by a technical fault in the machine or is related to the patient's medical condition. Meanwhile, the engineer responsible for developing the equipment may not fully understand the clinical implications of the problem. In such situations, specialists with knowledge of both medicine and technology can play an important role. They can improve communication between doctors and engineers, enhance the performance of medical equipment and help make disease detection more accurate. These specialists are not intended to replace doctors or conventional engineers. Instead, they are trained to work alongside them, combining their respective areas of expertise to solve complex healthcare problems. IIT Madras: A New Convergence of Medical Science and Engineering IIT Madras has undertaken academic initiatives in medical science and technology to strengthen the relationship between medicine, engineering and modern scientific research. Its programmes in medical science and engineering cover subjects such as human physiology, mathematical modelling, clinical neuroscience and medical imaging. These subjects help students understand how

engineering principles can be applied to the study of the human body, disease diagnosis and medical research. Professor V. Kamakoti, Director of IIT Madras, has emphasised the importance of technical institutions taking an active role in medical science. Developing India's capabilities in medical equipment and healthcare technology is an important long-term national priority. By encouraging interdisciplinary education and research, IIT Madras aims to contribute to the development of innovative healthcare solutions and advanced medical technologies. IIT Kharagpur: Advancing Medical Education and Research IIT Kharagpur has been working in the field of medical science and technology for many years. Its School of Medical Science and Technology was established in 2001. The institute's Master of Medical Science and Technology (MMST) programme was designed particularly for qualified doctors who wish to strengthen their medical expertise through knowledge of engineering and physical sciences. IIT Kharagpur has also developed medical facilities and research initiatives through the Dr. B. C. Roy Institute of Medical Sciences and Technology on its campus. Research opportunities in this field include medical imaging, molecular imaging, biomaterials, implants, biophysics, early cancer detection, immunotechnology and clinical biomarker discovery. These initiatives aim to encourage the development of innovative medical technologies and connect scientific research with the practical needs of patients. The broader vision is to create an environment in which doctors, engineers and researchers work together to improve diagnosis, treatment and healthcare delivery. IIT Kanpur: The Gangwal School of Medical Sciences and Technology IIT Kanpur's Gangwal School of Medical Sciences and Technology represents another important initiative to bring medical education, advanced healthcare research and engineering innovation together. Such interdisciplinary institutions offer significant opportunities for developing advanced diagnostic systems, medical robotics, biomedical devices and AI-based healthcare solutions. The objective is not merely to design new machines, but also to understand

how technology can be made safer, more effective, affordable and responsive to the actual needs of patients. Collaboration between medical professionals and engineers can help ensure that technological innovations address genuine clinical problems rather than simply introducing new equipment into hospitals. Will the Demand for Medical Engineers Increase in the Future? As technology transforms healthcare, demand is likely to grow for specialists with expertise in biomedical engineering, medical imaging, medical artificial intelligence, bioinformatics, robotics and the design of healthcare equipment. Professionals trained in these fields can explore career opportunities in hospitals, medical-device companies, research institutions, universities and health-technology enterprises. However, it is important to distinguish between medical engineering and an MBBS qualification. An engineering degree does not, by itself, authorise someone to diagnose or treat patients. Medical practice requires the prescribed medical qualifications and compliance with applicable regulations. Medical engineers contribute by designing, developing, testing and improving the technologies that doctors use in patient care. This combination of scientific knowledge, engineering skills and an understanding of healthcare needs is likely to become increasingly valuable in the years ahead. Why Is Indigenous Medical Technology Important for India? India needs to strengthen its self-reliance in medical equipment and healthcare technology. Developing domestic capabilities in the design, manufacture and maintenance of advanced scanners, ventilators, pacemakers and life-support systems can help reduce dependence on imported equipment. Indigenous innovation can also produce affordable and reliable technologies suited to Indian conditions. Such solutions could be particularly valuable for rural hospitals, smaller healthcare centres and remote communities where access to advanced medical facilities remains limited. When Indian institutions encourage collaboration among doctors, engineers, scientists and industry, they can help translate laboratory discoveries into practical applications in hospitals and healthcare

settings. This approach can also support entrepreneurship, generate skilled employment and strengthen India's position in the global medical-technology sector. What Can India Learn from the World? The Massachusetts Institute of Technology (MIT), located in Cambridge, Massachusetts, in the United States, is internationally recognised for research in engineering, computing, artificial intelligence and medical technology. MIT is not a conventional medical school that awards an MBBS degree. Instead, it contributes to healthcare innovation through technological research and collaboration with medical institutions and researchers. Its work illustrates how engineering and scientific research can support the development of new medical devices, AI-based diagnostic methods, advanced imaging systems and innovative treatment technologies. The broader lesson is that progress in modern medicine depends not only on doctors and hospitals but also on scientists, engineers, researchers and technology developers working together. Conclusion The initiatives at IIT Madras, IIT Kharagpur and IIT Kanpur reflect the growing relationship between medical science and engineering in India. The future of healthcare will require not only skilled doctors and advanced machines but also technologies designed around the real needs of patients. Interdisciplinary education and research can help make diagnosis more accurate, treatment more effective and medical equipment more accessible. These initiatives may open new opportunities in medical research, indigenous device manufacturing and healthcare technology. They can also provide promising career pathways for students interested in science, mathematics, engineering and human health. In the medicine of the future, doctors and engineers will not be substitutes for one another; they will be partners. Their collaboration can pave the way for better diagnosis, improved treatment and a more self-reliant India in medical technology.

What Are the Vedas, and What Have They Given the World?

Parivahan Vishesh News

With chanting and flower shower, Aryika Vishnuprabha Mataji Sangh's auspicious entry in Bhankrota Jain Temple, lamp worship of Bhaktamar Stotra with 48 lamps, devotees worshipped with devotion

On Sunday, Kalashabbhishek, Shantidhara and Vidhan Pujan will be held in presence of Aryika Sangh, annual fair will conclude with collective Goth

Jaipur. Two-day annual fair started on Saturday in very ancient and Atishay Kshetra Digambar Jain Temple of Bhankrota situated on Ajmer Road, with auspicious entry of Aryika Vishnuprabha Mataji S Sangh. On this occasion devotees gave grand welcome to Aryika Sangh amid band music, chanting and flower shower. Before this, Aryika Sangh started Vihar at 6:15 am from Digambar Jain Temple situated at Kamla Nehru Nagar. Passing through Ajmer Road and Bhankrota Bus Stand, Sangh made auspicious entry in Atishay Kshetra Jain Temple. Office bearers of Temple Management Committee and

members of Mahila Mandal welcomed Aryika Sangh by washing feet and performing aarti. After this, Kalashabbhishek of very ancient idol of Moolnayak Bhagwan Parshwanath seated in temple was done and grand Shantidhara was completed from mouth of Aryika Vishnuprabha Mataji.

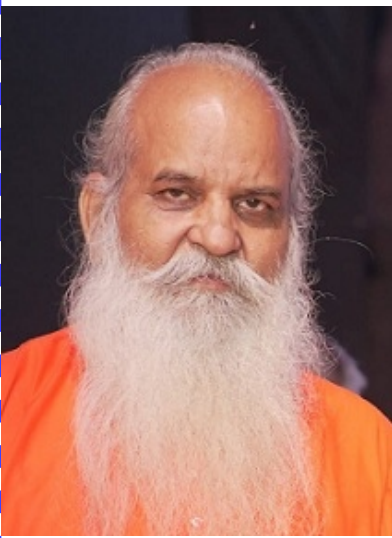

Vishnuprabha Mataji S Sangh. At 7 am, Kalashabbhishek and Shantidhara of Shri Ji will be held. At 8 am, auspicious discourses of Aryika Shri Vishnuprabha Mataji will be held and at 9:30 am AaharCharya of Aryika Sangh will be completed.

After this at 11:15 am, Vidhan Pujan will start in presence of Aryika Sangh. During this, collaborators of event and invited guests will be honoured and felicitated. After religious rituals, collective Goth of Jain Samaj will be organized. In evening session, two-day annual fair will conclude with Maha Mangal Aarti of Shri Ji.

Akhil Bharatiya Digambar Jain Yuva Ekta Sangh President Abhishek Jain Bittu told that on first day of fair at 9 am, auspicious discourses of Aryika Vishnuprabha Mataji S Sangh were held. After this at 10 am AaharCharya of Aryika Sangh started. In evening session at 6:15 pm, Maha Mangal Aarti of Shri Ji was performed. After this, discourse of Brahmacharini Shaili Didi was held. At 7 pm, on behalf of Bhankrota Jain Samaj, grand Deep Archana was done on Bhaktamar Stotra Mandal by offering Argh with 48 lamps. Devotees obtained religious benefit by worshipping God with devotion.

Mela Chief Coordinator Nagendra Sethi told that on Sunday, second day of annual fair, various religious programs will be held in presence of Aryika

Scientific-Spiritual Significance of Sharad Poornima

Parivahan Vishesh News

Dr. Vinod Babbar

Sharad is the symbol of our life. That's why the season is the king's basant, but he wishes for a long life. Pura Vedic literature proclaims the beauty of Sharad and says - Jivem Sharad: Shatam. Mrs. Sharad was alive while doing karma. Jeevan men raga, rasa-rang ka pratik to basant hai. But the symbol of his struggle is Sharad.

Only one day in the whole year is Sharad Purnima Ka Chand Solah Kalaon Hota Hai. Says Amrit rains on the moon. So autumn is also a symbol of immortality. If you see it spiritually, the moon means coldness. No matter how many disturbing events happened outside, but our mind and brain should be so strong that worldly obstacles, diseases and difficulties cannot distract us.

Yoon To Har Mah Mein Purnima Aati Hai But Sharad Purnima ka importance is most important. This beautiful combination of the baby form of the spring season and the child form of the autumn leaves everyone's mind

enthralled. The reason is clear - there is neither cloud nor dust in the sky. That is very clear. Aise mein full moon ki chhata nirali hoti hai. That's why it is called a glittering night filled with joy and fun.

This Purnima has also been mentioned as special in our religious texts. It is believed that Goddess Lakshmi of Samriddhi Vaibhav was born on the day of Sharad Purnima. The birth anniversary of Maharishi Valmiki is also celebrated on this Purnima of Ashwin month. It is well known that Maharishi Valmiki composed the Ramayana before the birth of Lord Rama. Mata Janaki stayed in his ashram where two sons were born to her in the form of Lav and Kush. The sage made those children perfect with many knowledges. Ashwin Mas Ki Purnima is also called Sharad Purnima, Ras Purnima, Kojagari. On this night, the moon is very close to the earth and its bright rays fall on drinks and food, the person who eats it stays healthy throughout the year. His body is getting fat. Lord Krishna said in verse 13 of chapter 15 of Gita:- Pushnami Chaushadhi: Sarva: Somo Bhutva Rasatka:..That is, I nourish all medicines, i.e. plants, by being a nectar-like moon. The story behind this day being called Kojagari Purnima is that on the night of Sharad Purnima, Goddess Lakshmi wanders in the sky and asks 'Are you awake'? Yani wah un logan ki lista hai hai jo raat mein jagal rahe hai. In Sanskrit 'kau jagrati' means 'who is awake'. Goddess Lakshmi bestows her blessings on those devotees who are awake on the night of Sharad Purnima and Mahalakshmi does not stay there for those who are sleeping. That is why people wake up and pray to the moon. Sharad Purnima is also called Raslila ki Raat.

According to religious scriptures, on the night of Sharad Purnima, Lord Krishna made rasa with the gopis. The psychological side of Sharad Purnima is seen. On this day, the moon is closest to our earth. The harvest of

paddy etc. is at its prime, so on this day, the farmer prays to Goddess Shakti for a good harvest and seeks her blessings. On this day, in the north-eastern parts of India, especially in Bengal and Orissa, virgin girls take a bath early in the morning and worship the sun and the moon. It is believed that this will get them a suitable husband. In short, everyone wants a healthy body, a happy mind and prosperity and wealth in their own way.

It is also to be remembered here that the month of Kartik starts from the next day of Sharad Purnima, on the fourth day Karva Chauth, followed by Ahoi, Terah, Dhanteras, Amavasya, the most famous festival of Indians, Diwali, Govardhan Puja, Bhaiya Dooj on the next day. Kartik Snan has a special importance, Kartik Purnima is celebrated all over India with the name of Guru Nanak Dev Ji's birthday, Ganga Snan, Kartik Purnima. It is believed that on this day the rays of the moon are endowed with special nectarine properties. It is said that Lord Ravana of Lanka used to absorb the nectar rays received on the night of Sharad Purnima on his navel and store life energy which gave him the power of rejuvenation.

It is the effect of those nectarine rays that many diseases are eradicated. This is the reason why people keep kneeer on the roofs of their houses on the night of Sharad Purnima so that the rays of the moon come in contact with that kneeer. Science also accepts that milk contains lactic acid and nectar. This element absorbs more energy than the rays. This process becomes easier due to the presence of starch in rice. It increases immunity by getting life-giving energy. Mixing some herbs in kneeer that absorbs the nectar from Dhaval Chandra gives relief from respiratory diseases. Therefore, on this day, large-scale events are organized in different parts of the country where medicines are provided free of cost along with pudding to the needy patients.

Suvarna Durga Puja Committee (Regd.) celebrates its 25th year of grand Durga Puja celebrations.

Parivahan Vishesh News

New Delhi. In the heart of the capital, Block 3A, WEA Sat Nagar, Ganga Mandir Marg, Karol Bagh, the Suvarna Durga Puja Committee (Regd.) celebrated its 25th year of grand Durga Puja celebrations.

Parivahan Vishesh Newspaper Daily

This year, the grand puja was held from October 15, 2026, to October 21, 2026. This puja is not just a religious ritual, but a symbol of our culture, unity, and Bengali tradition. This year, the festival was given an even grander touch to commemorate the Silver Jubilee Celebrations (25th Year). The committee's (Chairman) Mr. Uttam Samant, (President) Mr. Sumer Maji, and (Cultural Secretary) Mr. Vikas Ujjainwal stated that "For the past 25 years, with the blessings of the Mother Goddess, we have been following this tradition." This year, a huge idol of Maa Durga was crafted by artisans from Kolkata. A cultural program was organized by artists from Mumbai and Kolkata. The main attractions this year were the offerings, lighting, flower decorations, and the grand Jagannath Puri pandal.

The chief guests on this occasion included the popular North-West Lok Sabha MP, Mr. Yogendra Chandolia; the International Special Contact Head, VHP, Mr. Kapil Khanna; the special guests included Mr. Manoj Kumar Balmiki, Member of the National Safai Karamchari Commission, Government of India; Mr. Rajesh Bhatia, Vice President of the BJP Delhi State; Mrs. Sona Kumari, Vice President of the BJP Delhi State; Mr. Umang Bajaj, Popular MLA, Rajendra Nagar; Mr. Rajesh Goyal, Member of the Delhi Cantonment Board, Ministry of Defense, Government of India; and Mr. Karol Bagh District President, Mr. Virendra Babbar, senior advocate and social worker from Guwahati, Ms. Nisha Poddar, Corona warrior and renowned social worker, Dr. Chiranjiv Malhotra, popular MLA from Karol Bagh, Mr. Vishes Ravi. Guests: Mr. Vipin Lamba, former President of Azadpur Mandi, Delhi Government; Mr. Ashok Sachdeva, Sangh Chalak of Rashtriya Swayamsevak Sangh, District Karol Bagh; Mr. Ramesh

Negi, District Karyavah of Rashtriya Swayamsevak Sangh, District Karol Bagh; Mr. Satyaprakash, City Sangh Chalak of Rashtriya Swayamsevak Sangh, District Karol Bagh; Mr. Pradeep, City Karyavah of Rashtriya Swayamsevak Sangh, District Karol Bagh; Mr. Anil, Treasurer of Rashtriya Swayamsevak Sangh, District Karol Bagh; Mr. Rohit Sahni, Treasurer of BJP, District Karol Bagh; and Mr. Anand Lal, General Secretary of BJP SC Morcha, District Karol Bagh.

MONEY & RELATIONSHIP PREDICTION

Know Your Day • Protect Your Money • Strengthen Your Relationships

Parivahan Vishesh News

25 OCTOBER 2026 | Day vibration: 9 — Completion, compassion, courage, transformation and release

Moolank 1

Money & Career: Day 9 adds purpose and completion to your leadership energy. Finish an important task, settle a pending payment or close an old professional matter before launching the next big move.
Relationship: Your direct nature can help resolve a long-standing issue when compassion replaces the need to be right. A sincere apology or acknowledgement can clear emotional tension.
Precaution: Avoid ego clashes, dramatic decisions and spending money merely to prove strength or generosity.
Make Your Day Better: Complete one unfinished matter with dignity and lead through maturity.

Moolank 2

Money & Career: Day 9 heightens your sensitivity and intuition. A pending partnership or money matter may need closure; listen carefully, but verify facts before making an emotional financial decision.
Relationship: Old feelings may surface. Use the day for forgiveness and honest conversation rather than silently carrying disappointment.
Precaution: Avoid guilt-based spending, emotional dependence and reopening an issue without a constructive purpose.
Make Your Day Better: Release one emotional burden while keeping a clear personal boundary.

Moolank 3

Money & Career: Day 9 gives your creative energy a meaningful direction. Complete a presentation, publish useful work or use communication to support a larger purpose rather than chasing attention alone.
Relationship: Warm words can heal today. Express appreciation or clear a misunderstanding, but avoid turning emotions into unnecessary drama.
Precaution: Avoid scattered commitments, social overspending and making promises in an emotional moment.
Make Your Day Better: Use your creativity to complete something that genuinely matters.

Moolank 4

Money & Career: Day 9 asks your practical nature to finish what is pending. Organise accounts, close an old obligation and remove an inefficient system before building the next structure.
Relationship: You may focus on fixing problems, but some situations need understanding rather than correction. Allow space for emotion without immediately offering rules or solutions.
Precaution: Avoid rigidity, holding grudges and carrying responsibilities that should already be released.
Make Your Day Better: Clear one practical backlog and let go of one outdated expectation.

Moolank 5

Money & Career: Day 9 asks your fast-moving energy to complete before changing direction. Settle unfinished work, follow up on promised communication and avoid abandoning a useful opportunity for a newer distraction.
Relationship: You may feel ready to move on quickly, while another person needs closure. Give the conversation enough time to end a matter respectfully.
Precaution: Avoid impulsive exits, careless spending and using novelty to escape uncomfortable emotions.
Make Your Day Better: Finish one promise before seeking the next experience.

Moolank 6

Money & Career: Day 9 blends your caring nature with service and completion. Review family or client obligations, settle a pending expense and give support where it creates real value rather than dependency.
Relationship: Compassion is strong, making forgiveness easier. Love deeply, but do not confuse care with carrying another person's entire emotional load.
Precaution: Avoid over-giving, comfort spending and staying in an unhealthy pattern out of guilt.
Make Your Day Better: Give wisely, forgive where appropriate and protect your own balance.

Moolank 7

Money & Career: Day 9 supports reflection and closure around your analytical nature. Complete research, archive what is no longer useful and make space for a clearer strategy.
Relationship: You may revisit old memories or unresolved feelings. Understand the lesson, communicate if necessary and avoid withdrawing into silence.
Precaution: Avoid over-analysis, isolation and repeatedly examining a situation that is already complete.
Make Your Day Better: Keep the wisdom, release the mental clutter and move forward lightly.

Moolank 8

Money & Career: Day 9 asks your ambitious energy to use power responsibly. Complete financial obligations, settle a professional dispute or redirect resources toward work with lasting value.
Relationship: Control is less useful than compassion today. A fair and mature conversation can resolve tension more effectively than pressure.
Precaution: Avoid power struggles, revenge spending and holding on to a conflict simply to prove a point.
Make Your Day Better: Close one important matter fairly and use your strength constructively.

Moolank 9

Money & Career: Your Moolank 9 strongly resonates with Day 9, amplifying courage, compassion, completion and transformative energy. Finish major pending matters and prepare for a fresh cycle rather than forcing an unnecessary new beginning.
Relationship: Emotions can be intense but healing is possible. Forgive what can be released, speak honestly and protect yourself from repeating an old pattern.
Precaution: Avoid anger, impulsive generosity, emotional drama and taking responsibility for everyone's problems.
Make Your Day Better: Complete, forgive and consciously make space for what comes next.

Jain Temple became devotional with echo of Namokar Mahamantra, Navagraha Yuva Mandal lit flame of Dharma-Sadhana

Parivahan Vishesh News

Flood of devotion surged in 35-minute collective Mahamantra recitation, Prabhavana given to devotees by distributing hot milk

Agra. Under auspices of Navagraha Yuva Mandal at Shri 1008 Prabhu Parshwanath Digambar Jain Temple, Sector-4B, Agra, collective recitation of Namokar Mahamantra for 35 minutes concluded with utmost devotion and faith. Temple premises became devotional with spiritual echo of Mahamantra.

Message of Dharma, Seva and Organization: This initiative of Navagraha Yuva Mandal displayed joining society in one thread through religious events and commitment of youth power towards Dharma and social service. In program devotees of society, temple committee, Mahila Mandal and children participated enthusiastically and obtained religious benefit.

Collective chanting gave message of religious faith, spiritual consciousness and social unity. There was also important cooperation of elders of society in making program successful. After

recitation, hot milk was distributed as Prabhavana on behalf of Navagraha Yuva Mandal.

In program active presence of Mandal President Sandesh Jain, Minister Abhishek Jain, Coordinator Praveen Jain, Treasurer Mayank Jain, Vice President Saurabh Jain, Deputy Minister Rohit Jain and Organization Minister Santosh Jain including all members of Mandal remained. Media In-charge Lucky Jain played leading role in arrangements and conduct of program.

Three day cultural exchange programme organized under Samagra Shiksha Delhi Education Department

Parivahan Vishesh News

New Delhi: A three-day cultural exchange programme was organised for the students of classes 6th, 7th and 8th between Bal Bhavan Public School, Mayur Vihar Phase-2 and RSKV Pocket-B, Mayur Vihar Phase-2 under Samagra Shiksha, Delhi Education Department.

During the event, students participated in cultural presentations, dance, sports, and debate competitions. Refreshments were provided for the children, and prizes were awarded to the winners of each competition.

On this occasion, Principal Dr. Manisha Rani highlighted the importance of cultural exchange. District Coordinator Dr. Anju Pal said that such programs

provide students with the opportunity to learn through experience. Cluster Coordinator Dr. Sapna Bhargava encouraged the children and shared her thoughts on the importance of culture.

Through this event, students had the opportunity to interact with other schools, showcase their talents, and learn new activities. Such events help children develop a sense of mutual cooperation, self-confidence, and respect for different cultures.

A 46-year-old woman was brutally murdered in West Singhbhum after being branded a witch.

Parivahan Vishesh News

Kartik Kumar Parichha, State Head -Jharkhand

Ranchi, West Singhbhum (UP), A 46-year-old woman was allegedly beaten to death with sticks in Koljomro village, under the Karaikela police station area of West Singhbhum district. She was accused of being a witch. Police have detained two suspects and are searching for two others. The deceased has been identified.

It is reported that she was sleeping at home on Friday night. Four accused allegedly entered her home and attacked her with sticks, resulting in her death. The accused fled the scene after committing the crime.

On Saturday morning, the family discovered the woman's body

lying in the house. The incident was reported to the police. As news of the woman's murder spread, an atmosphere of anxiety descended on the village and surrounding areas.

Upon receiving information about the incident, Karaikela Police Station Officer Pyar Hasan arrived at the scene with a police team. Police inspected the scene, took possession of the body, and sent it for post-mortem. Given the seriousness of the case, police launched raids to arrest the accused. Two suspected suspects were detained and are being interrogated. Raids are underway at potential hideouts to apprehend two other suspects allegedly involved in the incident.

A police team led by Karaikela Police Station Officer Pyar Hasan is investigating the case. According to reports, two of the accused have been detained and are being questioned, while a search is underway for the other two.

Pradesh Congress Holds Press Conference on Jaleswar Minor’s Gang Rape and Murder; Demands Crime Branch Probe

Parivahan Vishesh News

Eight-hour Jaleswar Bandh called for October 27

Manoranjan Sasmal , State Head Odisha

Bhubaneswar : The Odisha Pradesh Congress Committee (OPCC) on Friday demanded a Crime Branch investigation into the alleged gang rape and murder of a Class IX girl from Debakumar village in the Paschim Bard area of Jaleswar. The party also announced an eight-hour Jaleswar bandh on October 27 in protest against the heinous incident. On October 22, a fact-finding team constituted at the direction of PCC president Bhakta Charan Das visited Jaleswar and collected detailed information about the incident. The team met the Inspector-in-Charge (IIC) of Jaleswar police station, the victim's parents, local residents and the Superintendent of Police (SP) of Balasore district. The fact-finding team included Basudevpur MLA and Congress Deputy Chief Whip in the Odisha Assembly Ashok Das; party general secretary Bank Bihari Behera; Jaleswar constituency leader and state chairman of the Rajiv Gandhi Panchayati Raj Sangathan Sudarshan Das; district Congress president Satya Shiva Das; state spokesperson Dr Manisha Das Patnaik; and district Mahila Congress president Urmila Majhi, among others. After returning to Bhubaneswar, the team submitted its report to PCC president Bhakta Charan Das and addressed a press conference at Congress Bhawan, presenting details of its findings. Addressing the media, Sudarshan Das alleged that the heinous crime had been influenced by the interference of ruling-party leaders in police affairs. He demanded an

investigation into which political leaders had contacted the IIC between October 16 and 22. He further alleged that more than one person might have been involved in the rape and murder. The chemicals and methods allegedly used to conceal evidence had made the case more complicated, he said. Demanding a Crime Branch probe, Das also called for the suspension of police officers found responsible, instead of merely transferring them. Dr Manisha Das Patnaik described the incident as a premeditated and planned crime. She said it was unfortunate that the Balasore MP and BJP leaders had held the police responsible for the incident, pointing out that the Police Department was under the Chief Minister's charge. She questioned why MP Pratap Sarangi was not holding the Chief Minister accountable. She also demanded compensation of 50 lakh for the victim's family and a government job for the deceased girl's elder sister. The bandh will be observed from 6 a.m. to 2 p.m. on October 27. Rail services, national highways and the transportation of essential commodities will be exempted from the shutdown, Behera said. He appealed to concerned citizens of Jaleswar, social organisations and like-minded political parties to support the bandh. He also said that torchlight processions, street-corner meetings and other public meetings would be organised ahead of the shutdown.

The Deception of Freedom, Democracy and Fundamental Rights

Parivahan Vishesh News

Writer Shankar Dev Tiwari, Senior Journalist and Thinker!

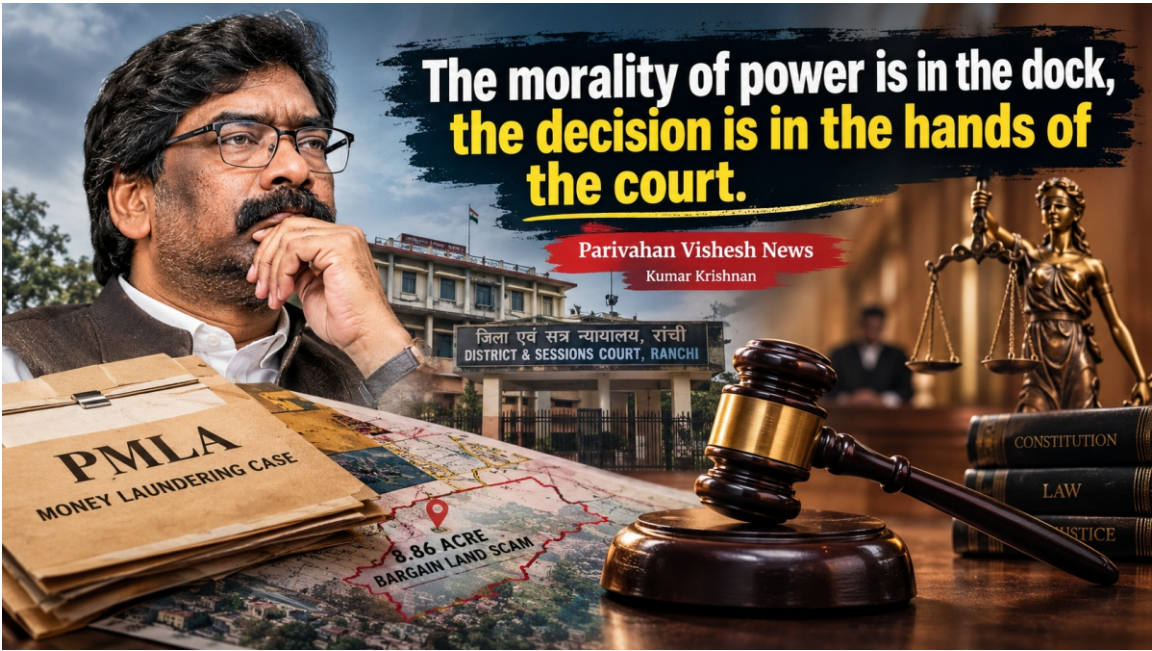

Presenter: Bhupendra Saraswat 'Sarathi'

If you will listen to the truth, only then you will think something.

These lines are not just beginning of a composition, but voice of that conscience of contemporary India, which is forced to contemplate on undeclared 'Hitlerian' and dictatorial tendencies growing within the system. We all proudly say that we are residents of great country India. But today biggest question is that why even after so many decades of independence we are internally divided into pieces? Why could we not become one as a complete nation ideologically and socially? See irony that even today basic identity of common citizen is in whirlpool of confusion. The common public who should have been protector of its fundamental rights, is still unaware of its basic rights. Our democracy, which claims to bridge gap between rich and poor (king and pauper), has today become merely a structure without real rights. Truth is that in guise of politics of reservation and unchecked

freedom, today democracy (people's democracy) has been mortgaged in corridors of power. Whatever remaining India was left, it has been completely coloured in colour of selfish politics. Our policy-makers had once framed rights and constitution with imagination of making this country heaven. But forgetting those rules in conduct, public has been pushed into hell-like anomalies, while rulers who lick cream of power consider themselves as 'gods' and settled in air-conditioned palaces. History is witness that here man never allowed other man to live and flourish openly in name of humanity. The remaining shortcoming was completed by politics, which now has become not 'people's policy' but 'death-policy'. This death-policy never allowed any good work to be implemented in society. Today's governance system's undeclared slogan has become this only that 'in guise of freedom, public may go to hell'. Policies are made in name of public interest, but they are used in guise of politics to serve self-interest. Governments are running with full arrogance and pride, while legislature representing public sentiments has been put on margin. In this cover of democracy today there is no one to listen to call of common public. Today in Hindustan talking about 'fundamental rights' seems merely a deception and fraud. This article accepting this bitter truth points towards a special mission - mission of revival of morality. Until common citizen of country does not understand this deception of politics and does not unite by recognizing his moral duties, till then real sun of democracy will not rise. Now time has come that we awaken our collective consciousness against this 'political death-policy'!!

The morality of power is in the dock, the decision is in the hands of the court.

Parivahan Vishesh News

Kumar Krishnan

In a democracy, the most important test for a Chief Minister is not merely winning elections and coming to power, but also proving his or her commitment to the law, constitutional norms, and public accountability while in power. The framing of

charges against Jharkhand Chief Minister Hemant Soren in the special Prevention of Money Laundering Act (PMLA) court in Ranchi in the case related to the 8.86-acre Bargain land scam raises this broader question. The case has now entered the next phase of the trial. But to understand this development, it is important to remember two things simultaneously—the gravity of the charges and the legal presumption of innocence of the accused in the judicial process.

On September 30, 2026, a special PMLA court in Ranchi framed charges against Chief Minister Hemant Soren in a money laundering case. He appeared in court via video conferencing and pleaded not guilty, denying the allegations against him. The court directed the prosecution to proceed with presenting witnesses and evidence. The next hearing has been scheduled for November 30. Charges had already been framed against 16 other accused in the case before Soren.

It's important to understand a fundamental legal distinction here. The framing of charges by the court does not mean that the accused has been found guilty. It simply means that the court has passed the stage of proceeding with the trial based on the available material. The prosecution will now present evidence to support its charges, witness statements will be recorded, and the defense will have the opportunity to question them. The final decision will be made only after a judicial trial. Therefore, misinterpreting the framing of charges as a conviction would be a misinterpretation of the judicial process.

The case relates to the alleged illegal acquisition of 8.86 acres of land in the Bargain area of Ranchi and related money laundering allegations. The Enforcement Directorate (ED) claims that the illegal acquisition of the property was facilitated by manipulation of land records and the use of forged documents. The investigating agency is investigating alleged irregularities in land documents and the role of a network involving private individuals and government officials. These are prosecution allegations, which will have to be proven through evidence in the trial. Soren has consistently denied these allegations.

At the heart of this case is not just a plot of land, but also the question of the reliability of land records and the accountability of the administrative system. Land documents are the foundation of a citizen's property, livelihood, and legal rights. If there is an attempt to illegally occupy land by manipulating records, the harm is not limited to one individual. It impacts public trust in the revenue system, government institutions, and the rule of law. Therefore, it is essential for the court to clarify how the alleged irregularities occurred, who played what role, and what conclusion the available evidence points to.

Hemant Soren's lawyers denied the charges in court and stated they would face trial. The defense has also filed a petition in the Jharkhand High Court challenging the constitutional validity of Section 44(1)(d) of the PMLA. This legal challenge and the ongoing trial in the special court must be understood separately. It is the accused's legal right to question the constitutional validity of a provision. On the other hand, unless the competent court stays the proceedings, the trial in the lower court can proceed as scheduled. Filing a petition in the High Court does not, in itself, equate to absolution from the charges or a stay of the trial.

Following this development, calls for the Chief Minister's resignation have intensified in Jharkhand politics. BJP chief spokesperson Pratul Shahdev urged Soren to step down on moral grounds. He expressed concern that Soren's continued tenure as Chief Minister could lead to the possibility of influencing witnesses or tampering with evidence. Leader of the Opposition in the Assembly, Babul Marandi, said the Chief Minister should present his case in court based on facts. BJP national spokesperson R.P. Singh also raised the issue as an alleged scam involving government land. In contrast, former Chief Minister Arjun Munda called for trust in the judicial process and competent investigating agencies, and for avoiding unnecessary public comment on court decisions.

It is natural for political parties to reflect their own

perspectives and interests in their reactions. It is the opposition's job to question the government and demand accountability. However, it is not appropriate to accept a political allegation as the court's final conclusion. Similarly, it is not sufficient for the ruling party or the Chief Minister's supporters to dismiss every question simply by citing political vendetta. In a democracy, the impartiality of investigative agencies' actions can be questioned, but those questions must be answered through facts, legal scrutiny, and a transparent process.

The question of the Chief Minister's resignation must be viewed with this same balance. The mere framing of charges does not automatically render a public representative guilty. It would be inaccurate to consider the mere framing of charges as a mandatory legal condition for resigning. On the other hand, the position of Chief Minister is not a typical political position. It carries with it a special responsibility to maintain administrative influence, public trust, and the impartiality of institutions. Therefore, it is natural to question how a Chief Minister facing serious allegations will ensure that the investigation, witnesses, and the judicial process are not unduly influenced.

This question cannot be answered merely by demanding resignation or announcing a decision to remain in office. It requires concrete facts, applicable legal provisions, and an impartial assessment of the circumstances. If there is any suspicion of influencing witnesses or tampering with evidence, it should be presented to the competent court based on evidence. The dignity of the Chief Minister's position demands that any situation that casts doubt on the independence of the investigation and trial be avoided. Furthermore, declaring someone guilty before a judicial verdict due to political pressure is also against democratic values.

The role of the Enforcement Directorate in this entire episode is not beyond the scope of investigation. The credibility of any investigating agency depends on its compliance with the law, gathering sufficient evidence to support its allegations, and fulfilling its responsibility to prove them in court. An investigating agency's allegations are not, in themselves, the ultimate truth. Only an examination of the evidence presented in court, the credibility of witnesses, and the defense's arguments will determine whether the allegations stand. This same criterion should be applied to any accused, whether they are a Chief Minister, an opposition leader, or an ordinary citizen.

In a state like Jharkhand, the issue of land holds special significance. Here, land is not just an economic asset, but also linked to tribal identity, livelihood, social security, and historical rights. Cases of alleged manipulation of land ownership and records therefore require extra sensitivity. If an influential person takes advantage of being above the law, it is a matter of serious concern, but if the allegations are not supported by evidence, the accused should receive judicial relief. Justice does not mean granting special protection to an influential person, nor punishing them under pressure from political or public sentiment.

The next hearing, scheduled for November 30th, will be crucial in this case, as the prosecution will proceed to prove its charges through its witnesses and evidence. Court proceedings should be judged on this criterion, rather than political rhetoric. Is credible evidence presented to support the charges? Is the defense given adequate opportunity to present its case? Are witnesses able to testify without pressure? And does the court evaluate the available material impartially? The answers to these questions will determine the course of the case.

In a democracy, the principles of accountability and presumption of innocence are not mutually exclusive. The public has the right to know how investigations into serious allegations against those in power are progressing. The accused deserve a fair trial and a full opportunity to prove their innocence. The judiciary has the responsibility to render decisions independent of political noise, and investigative agencies have the responsibility to present lawful evidence to substantiate allegations.

The framing of charges against Hemant Soren is a significant development for Jharkhand politics, but the final outcome of this case still depends on the judicial process. Neither does framing of charges establish guilt, nor does political support absolve charges. The real test is the facts and evidence presented in court. Whether it's the Chief Minister or an ordinary citizen, accountability before the law and a fair trial are equally important.

The credibility of democracy lies in ensuring that power is not above question and justice is not subject to political pressure. The people of Jharkhand not only await impartial justice in this case, but also need assurance that the law will be applied equally to all on a sensitive issue like land. The gravity of the allegations can only be answered through judicial scrutiny, and the morality of power can only be answered through transparency and accountability.

Dr Vijay Garg

Retired Principal Educational columnist Eminent Economist street kour Chand MHR Malout Punjab

Parivahan Vishesh News

Dr. Vijay Garg

India is one of the world’s most biologically diverse countries, blessed with magnificent forests, grasslands, wetlands, mountains, deserts and coastal ecosystems. These habitats support an extraordinary variety of wildlife, including Bengal tigers, Asiatic lions, Asian elephants, one-horned rhinoceroses, snow leopards, gharials and countless species of birds, reptiles and insects. However, this natural wealth faces growing threats from habitat destruction, pollution, climate change, poaching and human-wildlife conflict. Despite these challenges, India’s conservation initiatives offer reasons for hope. ## The Growing Crisis of Wildlife Decline Wildlife decline is not merely the disappearance of individual animals; it is a warning that entire ecosystems are under pressure. Expanding cities, roads, railways, mining, agriculture and industrial development often fragment natural habitats. When forests are cleared or divided into smaller patches, animals lose food, shelter, breeding grounds and safe migration routes. Poaching and illegal wildlife trade create additional dangers. Animals are hunted for their skin, bones, horns and other body parts, while birds and

reptiles are sometimes captured for illegal trade. Pollution, pesticides, plastic waste and contaminated water further threaten terrestrial and aquatic species. Climate change is intensifying these pressures. Rising temperatures, changing rainfall patterns, prolonged droughts, floods and forest fires can alter habitats and reduce food availability. Species dependent on specialised environments, particularly those living in the Himalayas, are especially vulnerable to ecological changes. ## Human-Wildlife Conflict As human settlements increasingly overlap with wildlife habitats, encounters between people and animals have become a serious concern. Elephants may damage crops, leopards may enter villages, and large carnivores may occasionally attack livestock or people. Such incidents can result in injuries, economic losses and the deaths of animals. Effective conservation must

therefore protect both wildlife and human communities. Early-warning systems, wildlife corridors, suitable fencing, rapid-response teams and timely compensation for losses can reduce conflict. Local communities should participate in conservation planning and receive a fair share of the economic benefits generated by responsible ecotourism. Wildlife protection cannot succeed by ignoring the legitimate concerns of farmers, forest-dependent communities and people living near protected areas. Cooperation is more effective than confrontation. ## India’s Conservation Success Stories Despite these difficulties, India has demonstrated that sustained conservation efforts can help threatened species recover. Project Tiger, launched in 1973, established a foundation for tiger conservation through protected areas, habitat management and anti-poaching

measures. India’s official 2022 assessment estimated approximately 3,682 wild tigers, although the actual population estimate included statistical uncertainty. This progress demonstrates the importance of scientific monitoring, habitat protection and coordinated enforcement. The Asiatic lion, now concentrated largely in Gujarat’s Gir landscape and surrounding areas, represents another conservation achievement. Protection of its habitat and restrictions on hunting have helped the population recover from its historical decline. However, its concentration within a limited geographical region makes disease preparedness and the development of additional secure habitats important priorities. The Indian one-horned rhinoceros has also benefited from protection, particularly in Assam’s Kaziranga National Park. Anti-poaching operations, habitat management and

Editorial

My Thought

carefully planned conservation programmes have supported its recovery. Similarly, crocodile conservation programmes have contributed to the recovery of certain crocodilian populations, while the reintroduction of locally extinct or declining species in selected habitats offers further opportunities for ecological restoration. These achievements show that wildlife decline is not always irreversible. With scientific planning, political commitment and community participation, nature can recover. ## Protected Areas and Wildlife Corridors National parks, wildlife sanctuaries, conservation reserves and community reserves form the backbone of India’s wildlife protection system. They provide safe habitats for animals and opportunities for research, education and responsible tourism. However, protected areas alone are insufficient when animals need to move between forests to find food, mates and suitable breeding grounds. Wildlife corridors connect fragmented habitats and enable movement across landscapes. Protecting these corridors is particularly important for elephants, tigers and other wide-ranging species. Development projects should therefore incorporate rigorous environmental assessments, wildlife crossings and measures to minimise habitat fragmentation. Economic growth and environmental protection must be planned together rather than treated as competing objectives. ## The Role of Citizens and Technology Wildlife conservation is not solely the responsibility of governments and forest departments. Citizens can contribute by avoiding products derived from illegal wildlife trade, reducing plastic consumption, conserving water and supporting credible conservation organisations. Schools can organise biodiversity surveys, nature walks, birdwatching activities and awareness campaigns. Such experiences encourage children to appreciate living organisms and understand the ecological relationships that sustain life. Modern technology is also transforming conservation. Camera traps, satellite tracking, drones, geographic information systems and artificial

intelligence can help monitor animal movements, identify poaching risks and study habitat changes. However, technology must complement field research and local knowledge rather than replace them. ## A Future Built on Hope and Responsibility India’s wildlife story is neither one of complete disaster nor of unquestionable success. Some species have shown encouraging recovery, while others remain endangered or poorly studied. Conservation achievements must not create complacency, because population growth, infrastructure expansion and climate change continue to place pressure on natural habitats. The way forward requires stronger enforcement against wildlife crime, restoration of degraded ecosystems, scientific population monitoring and meaningful participation by local communities. Governments, scientists, businesses, educational institutions and citizens must share responsibility for protecting biodiversity. **Wildlife conservation is ultimately about safeguarding the natural systems that sustain human life.** Forests regulate climate and water cycles, wetlands reduce flood risks, and healthy ecosystems support agriculture and livelihoods. Protecting wildlife is therefore not a luxury; it is an investment in our collective future. India has shown that determined conservation can bring species back from the brink. The challenge now is to extend that hope across landscapes and protect not only famous animals but also lesser-known species, insects, amphibians and the habitats on which all life depends. The future of Indian wildlife will be shaped by the choices made today. If development respects ecological limits and communities become partners in conservation, India can transform its story of decline into one of resilience, recovery and lasting hope.

Waste Management: New Opportunities for Employment and Entrepreneurship

Parivahan Vishesh News

Dr. Vijay Garg

Waste management is no longer merely a matter of collecting and disposing of garbage. It has emerged as an important sector offering new opportunities for employment, entrepreneurship, innovation and environmental protection. As populations grow, cities expand and consumption increases, the amount of waste generated by households, industries, markets and institutions continues to rise. If managed properly, this waste can become a valuable resource and a source of sustainable economic growth. The traditional approach of dumping waste in landfills or burning it creates serious environmental and health problems. Air pollution, contaminated groundwater, soil degradation and greenhouse gas emissions are among the major consequences of improper waste disposal. A scientific and organised waste management system can reduce these problems while generating income and creating jobs for thousands of people. ## Waste Is a Resource, Not a Burden Waste management begins with the simple principle that different types of waste require different methods of treatment. Household waste generally includes biodegradable materials, paper, plastic, glass, metals, electronic waste and other discarded items. When these materials are separated at the source, many can be reused, recycled or converted into useful products. Organic waste from kitchens, vegetable markets, hotels and agricultural activities can be transformed into compost or biogas. Compost improves soil fertility and reduces dependence on chemical fertilisers. Biogas can provide energy for cooking, heating and certain industrial applications. Similarly, paper, plastic, glass and metals can be collected, sorted, processed and supplied to recycling industries. These activities create employment for waste collectors, transport workers, machine operators, technicians, entrepreneurs and marketing professionals. ## Recycling: A Growing Business Opportunity Recycling is one of the most promising areas of waste-based entrepreneurship. Entrepreneurs can establish small collection centres where discarded materials are purchased, sorted and supplied to recycling units. With appropriate investment and training, larger enterprises can process plastic, paper, metals and other recyclable materials. Plastic waste can be converted into recycled granules for manufacturing certain new products. Waste paper can be processed into recycled paper and

packaging materials. Scrap metal can be recovered and reused in manufacturing industries. Such businesses reduce the demand for virgin raw materials and help conserve natural resources. They also support the development of a circular economy, in which materials remain in productive use for as long as possible rather than being discarded after a single use. However, recycling must follow environmental and safety standards. Some plastics and mixed materials are difficult to recycle economically, making waste reduction and responsible product design equally important. ## Composting and Biogas Production Organic waste management offers special opportunities in rural areas, towns and agricultural communities. Farmers, self-help groups, cooperatives and young entrepreneurs can establish composting units using agricultural residues, animal dung, food waste and garden waste. The resulting compost can be sold to farmers, nurseries, gardeners and landscaping businesses. Small-scale biogas plants can also convert suitable organic waste into renewable energy while producing nutrient-rich digestate. Municipal bodies, educational institutions, residential societies and hotels can collaborate with local entrepreneurs to establish decentralised waste processing facilities. Such arrangements reduce transportation costs and help create local employment. ## E-Waste: An Emerging Employment Sector The rapid growth of digital technology has increased the disposal of mobile phones, computers, televisions, batteries and other electronic devices. Electronic waste contains valuable materials, including copper, aluminium and certain precious metals. However, it may also contain hazardous substances that can harm workers and the environment if handled improperly. This creates opportunities for authorised e-waste collection centres, repair businesses, refurbishment enterprises and specialised recycling facilities. Repairing and refurbishing electronic devices can extend their useful lives and make technology more affordable. E-waste must be handled through authorised channels, with appropriate protective equipment and scientifically approved recovery methods. Informal dismantling and unsafe chemical processing should be avoided. ## Green Skills and Youth Entrepreneurship Waste management is not limited to manual labour. Modern systems require professionals skilled in environmental science, engineering, logistics, data management, digital marketing and business administration. Young people can develop mobile applications connecting households with recyclers, introduce digital systems for tracking waste

collection, design reusable packaging and develop products made from recovered materials. They can also provide waste audits, composting services and recycling consultancy to schools, offices, markets and industries. Skill development programmes, vocational education, entrepreneurship training and access to affordable finance can help young people transform innovative ideas into viable businesses. Women’s self-help groups and rural cooperatives can also participate in compost production, reusable bag manufacturing and local recycling initiatives. ## The Role of Government and Society Effective waste management requires cooperation among governments, industries, educational institutions, businesses and citizens. Local authorities should promote waste segregation, establish reliable collection systems and support authorised recycling enterprises. Industries must take greater responsibility for the waste generated by their products and packaging. Public awareness campaigns should encourage people to reduce consumption, reuse materials and separate waste at home. Schools and colleges can establish composting units, organise recycling drives and introduce practical environmental education. These activities can develop responsible habits while demonstrating that environmental protection can also create economic opportunities. ## Conclusion Waste management represents a powerful combination of environmental responsibility and economic opportunity. What appears to be useless garbage can become compost, renewable energy, recycled raw material and a source of livelihood when handled scientifically. The future of this sector depends on innovation, investment, public participation and responsible business practices. By encouraging waste segregation, recycling, repair, reuse and resource recovery, India can create green jobs, support local entrepreneurs and reduce pressure on natural resources. The real challenge is to change our attitude towards waste. Instead of asking where discarded materials should be dumped, we should ask how they can be recovered and put to productive use. This change in thinking can turn waste into wealth, unemployment into enterprise and environmental challenges into opportunities for sustainable development.

Logistics: New Career and Employment Opportunities for Youth

Parivahan Vishesh News

Dr. Vijay Garg

In today's rapidly changing economy, logistics has emerged as one of the most important sectors for economic growth, trade and employment generation. The expansion of e-commerce, online shopping, manufacturing, international trade and digital services has significantly increased the demand for efficient transportation, warehousing and supply chain management. For young people seeking promising career opportunities, the logistics sector offers diverse employment options, professional growth and opportunities for entrepreneurship. Logistics refers to the planning, movement, storage and delivery of goods from their place of origin to the final consumer. It includes transportation by road, rail, air and sea, inventory management, packaging, warehousing, order processing and delivery services. An efficient logistics system ensures that products reach the right destination at the right time and at an appropriate cost. It is the backbone of modern commerce and industry. ## A Rapidly Expanding Sector India's growing economy, expanding infrastructure, increasing manufacturing activity and booming e-commerce industry have created new opportunities in logistics. Online shopping platforms, supermarkets, pharmaceutical companies, automobile manufacturers, food processing industries and retail businesses all depend on effective supply chains. The development of highways, freight corridors, ports, airports, logistics parks and multimodal transport facilities is further strengthening the sector. Government initiatives promoting infrastructure development, digitalisation and manufacturing have also increased the importance of logistics professionals. The growing need for faster deliveries, better inventory control and cost-effective transportation means that skilled workers are required at every stage of the supply chain. Consequently, logistics is no longer limited to drivers, warehouse workers and delivery personnel. It has become a technology-driven industry requiring trained managers, analysts, engineers and digital specialists. ## Diverse Career Opportunities One of the biggest advantages of the logistics sector is the wide range of careers it offers. Young people can choose employment according to their educational qualifications, interests and skills. 1\ Supply Chain Management: Supply chain professionals coordinate purchasing, production, storage and distribution. They help organisations maintain the smooth movement of goods and minimise operational costs. Graduates in business administration, commerce and supply chain management can explore this field. 2\ Transportation and Fleet Management: Transportation managers plan delivery routes, supervise vehicle operations, monitor fuel consumption and ensure timely deliveries. Knowledge of transport regulations, route

optimisation and fleet-tracking technology is useful for these positions. 3\ Warehousing and Inventory Management: Warehouses are essential for storing products before distribution. Warehouse supervisors, inventory controllers, stock managers and operations executives ensure that goods are stored safely and dispatched efficiently. Knowledge of inventory software and warehouse automation can improve career prospects. 4\ E-commerce and Last-Mile Delivery: Online shopping has created employment in order fulfilment, dispatch operations, delivery coordination, returns management and customer service. These roles are available at different skill levels and can provide entry points for young job seekers. 5\ International Trade and Freight Forwarding: Import-export companies require professionals who understand shipping procedures, customs documentation, cargo handling and international trade regulations. Courses in international business, logistics and foreign trade can be beneficial. 6\ Technology and Data Analytics: Modern logistics increasingly uses artificial intelligence, GPS tracking, automated warehouses, robotics and data analytics. Professionals who can analyse transportation costs, forecast demand and improve delivery efficiency are becoming increasingly valuable. ## Educational Qualifications and Skills The logistics sector offers opportunities to school leavers, diploma holders, graduates and postgraduate students. Entry-level jobs may be available to candidates with basic educational qualifications and practical training. Diploma and certificate programmes in logistics, transportation, warehousing and supply chain operations can help candidates acquire industry-relevant skills. Graduates in commerce, management, engineering, information technology and economics may pursue specialised courses or postgraduate programmes in supply chain management and logistics. Vocational training and apprenticeships can also provide practical experience. Apart from formal qualifications, communication, teamwork, problem-solving, time management and decision-making are essential. Digital literacy is particularly important because many companies use specialised software to track shipments, maintain inventory and manage orders. ## Entrepreneurship and Self-Employment Logistics also provides

opportunities for young entrepreneurs. Small businesses can explore local delivery services, transport coordination, packaging, courier franchises, warehouse support and specialised distribution services. Entrepreneurs may also develop digital platforms connecting transport operators with businesses. However, starting a logistics business requires careful planning, market research, financial management and compliance with applicable regulations. Young entrepreneurs should begin on a manageable scale and gradually expand as their experience and customer base grow. ## Challenges and the Way Forward Despite its promising future, the sector faces challenges such as long working hours in some roles, infrastructure gaps, operational costs, worker safety concerns and pressure to deliver goods quickly. Automation may also change certain traditional jobs, making continuous skill development essential. Educational institutions, training centres and employers should work together to provide practical training, internships and industry-oriented courses. Greater attention must be given to workplace safety, fair wages, professional certification and career progression. Young people should verify the credibility of training institutes and employment offers before investing money in courses or recruitment services. ## Conclusion The logistics sector offers young Indians an opportunity to build careers in a field that directly supports economic development. From transportation and warehousing to international trade, management and advanced technology, its employment possibilities are extensive. With the right education, practical experience, digital skills and willingness to learn, young people can find meaningful employment and progress towards leadership positions. For those with entrepreneurial ambitions, logistics also offers opportunities to establish independent businesses. Logistics is no longer merely about moving goods from one place to another; it is about connecting markets, strengthening businesses and creating careers. With appropriate training and effective planning, this expanding sector can become an important source of employment, professional growth and economic opportunity for India's youth.

It is important to establish the quality and ethics of research on the global stage: Prof. M.P. Sinha

Parivahan Vishesh News

Bodhgaya. On October 24th, a lecture on "Research and Academic Leadership" was organized in memory of the late founding Head of the Department, Professor Shyam Bihari Singh, under the joint auspices of the Departments of Zoology and Biotechnology at Magadh University. The keynote speaker, Professor Manoranjan Prasad Sinha, a senior professor and renowned scientist at Ranchi University, explained the nuances of research quality, ethics, research paper writing, citation, and publication in prestigious journals. He stated that only quality and ethical research leads to global recognition.

Prof. S.N.P. Yadav "Din," Dean of the Science Department, was the coordinator, and Professor Reshma Yasmin, Head of the Department of Zoology and In-Charge of Biotechnology, was the co-convenor. Former Head of the Department, Professor Sunil Kumar Singh, was present. The stage was moderated by Mrs. Abha Kumari. Dr. Kumari Aditi, Dr. Sarfaraz Ali, Dr. Virendra Kumar, and Dr. L.K. Tarun played a commendable role in the event. Postgraduate and PhD scholars participated in the lecture.

Deputy Commissioner inspected Birsa Munda District Library

Parivahan Vishesh News

Khunti: Deputy Commissioner Md. Javed Hussain inspected Birsa Munda District Library and reviewed the operation of library, cleanliness, drinking water, toilet, electricity arrangement, seating facility for students and environment conducive

for study. During this, he took information of staff and librarian working in library and emphasized on improving arrangements.

During inspection, Deputy Commissioner directed Executive Engineer of Building Division to take necessary action for renovation of building as per requirement and to

Electricity Department to ensure resolution of electricity related problems. Also, said to make planned use of fund received for operation of library and to ensure better operation of canteen located in library premises. * Deputy Commissioner met students studying in library and took information of their problems and requirements.

Neighbourhood Youth Parliament Organised under the Theme ‘Nasha Mukta Yuva Bharat’; Over 200 Young People Participate

Parivahan Vishesh News

New Delhi, 24 October 2026
Parivahan Vishesh Newspaper Daily

With the objective of raising awareness among young people about the harmful effects of substance abuse, encouraging their active participation in nation-building, and familiarising them with democratic processes, the Neighbourhood Youth Parliament was organised at Sarvodaya Co-ed Vidyalaya, Hari Nagar Ashram, New Delhi, by MY Bharat South Delhi, Ministry of Youth Affairs and Sports, Government of India, under the theme 'Nasha Mukta Yuva Bharat' (Drug-Free Youth India). More than 200 young people enthusiastically participated in the programme. The programme was inaugurated in the august presence of the Chief Guest, Hon'ble Justice Rajesh Tandon, Former Judge of the Uttarakhand High Court. The guest was welcomed into the school hall by the NCC team. The programme aimed to strengthen awareness about substance-abuse prevention, promote a healthy lifestyle, and encourage young people to participate actively in social and democratic initiatives. During the programme, Mrs. Neelam Bisht, EVGC, delivered an awareness lecture on the topic 'Drug-Free Youth for a Developed India'. She highlighted the harmful effects of substance abuse, its impact on the health and future of young people, and the crucial role of youth in building a substance-free society. Following this, Mr. Abhinav Pandey, Youth Icon, Ministry of Youth Affairs and Sports (MoYAS), Government of India, and BRICS Youth Representative, provided an overview of MY Bharat and the opportunities it offers for youth engagement. He encouraged young people to become part of the 'Nasha Mukta Yuva Bharat' mission and spread awareness within their families, educational institutions, and communities. He emphasised that the role of youth in nation-building extends beyond individual development to addressing social challenges and creating meaningful, positive change. The Chief Guest, Hon'ble Justice Rajesh Tandon, addressed the participants on the personal and social consequences of substance abuse. He urged young people to raise their

voices against substance abuse, adopt positive habits, become responsible citizens, and contribute actively towards building a drug-free society. As part of the programme, four technical sessions were conducted on the theme of Nasha Mukta Bharat. These sessions focused on the harmful effects of substance abuse, the importance of awareness, and the role of young people in creating a substance-free society. Subsequently, a Model Neighbourhood Youth Parliament was organised, during which participants engaged in parliamentary-style discussions on two significant national issues: the Women's Reservation Bill and 'One Nation, One Election'. Young

participants deliberated on the potential benefits, challenges, and various dimensions of both proposals. Following the discussions, both bills were passed as part of the model parliamentary exercise. The activity provided participants with practical exposure to parliamentary procedures, critical thinking, leadership, public speaking, and democratic participation. The programme was hosted by Mrs. Triveni. Mrs. Madhu Bala, Vidyanjali In-charge, and Mrs. Neelam Bisht, EVGC, played significant roles in coordinating the programme. During the concluding session, the Principal of the school, Mrs. Kanta, delivered the vote of thanks, expressing gratitude to the Chief Guest, resource persons, organisers, and participants for their valuable contributions. The programme served as an important initiative to encourage young people to stay away from substance abuse, adopt healthier lifestyles, and spread awareness within society. In keeping with the vision of 'Nasha Mukta Yuva Bharat', the Neighbourhood Youth Parliament conveyed a strong message of youth leadership, civic responsibility, and democratic values.

Barwala gets gift of modern bus stand, Cabinet Minister Ranbir Gangwa inaugurates

Parivahan Vishesh News

Gangwa says work going on many projects including modern grain market, city park, Rambag and stadium, government committed to make city beautiful and convenient

Haryana/Hisar (Rajesh Saluja)

Development works are being continuously given momentum in Barwala city. Modern bus stand has been built and ready in city. Construction work of modern grain market adjacent to bus stand is also going on. Government's effort is that citizens get better facilities in Barwala city and city is made modern and beautiful. This was said by Haryana's Public Works and Public Health Engineering Minister Ranbir

Gangwa while addressing people present during inauguration of Barwala bus stand on Saturday. He told that inside bus stand modern arrangements have been developed keeping in mind convenience of citizens. These include six new bus bays along with shop, ticket vending machine, AC waiting room and separate room for breastfeeding child has been made. For passengers, arrangement of toilets friendly for women, men and disabled persons has also been made. On first floor, five office rooms, two dormitories for drivers, one additional room and arrangement of toilets has been made. He said that with construction of modern bus stand, passengers will get better facilities and transport system in Barwala will be strengthened. Construction of bus stand is important step in

direction of development of city. Cabinet Minister said that government is continuously making efforts to fulfil promises made regarding development in Barwala city. Tender of about Rs 3.30 crore has been done for development of Rambag. City Park will also cost about Rs 3.30 crore. Apart from this, works related to roads, streets, library and other public facilities are being done in city. Construction work of city's stadium is also in progress, while work of community centre is almost going to be completed. He told that entrance gates are being constructed in all four directions of Barwala city. Beautiful squares will be developed on both entry and exit sides of city from Hisar side. This will increase beauty of city and people will get better urban facilities.

Construction work of most streets of city has been completed. Work of remaining streets will also be started soon. Cabinet Minister Ranbir Gangwa told that under leadership of Chief Minister Nayab Singh Saini, development works are moving fast in state. BJP government is continuously working in direction of fulfilling promises made to public during elections. Out of 210 promises made after formation of government, 75 promises have been fulfilled. He said that important decisions like giving Rs 2100 to women under Lado Lakshmi Yojana and giving separate reservation to BC class reflect welfare thinking of government. As per Pandit Deendayal Upadhyay's principle of Antyodaya, government's effort is that benefit of government

schemes and services reaches last person. Cabinet Minister said that under Prime Minister Narendra Modi's vision of developed India and leadership of Chief Minister Nayab Singh Saini, Haryana is continuously progressing. By taking forward development projects in Barwala city, better facilities are being made available to citizens. This series of development works will continue further to make city beautiful, clean and modern. On this occasion former Chairman Satbir Verma, SDM Ashvir Nain, Roadways General Manager Rahul Mittal, Mandal President Monu Sanduja, Municipal Council Chairman Ramesh Batterywala, Mandi Chairman Praveen Saini, Vice Chairman Roshan Ghanghas, District Councillor OP Malia, Barwala Assembly Media In-charge BJP Kamal Handuja,

TM Pritam Siwach, SPO Rajbir Gautam, BJP Senior Leader Dev Sharma, Mahesh Sharma, Rajbir Lamba, Sunil Mehta, Social Worker Ramkesh Bansal, Poonam Jangra, Mandal Media In-charge BJP Barwala Rajesh Saluja, Shubham Madan, Tarsem Poonia, Sujit Prajapati, Suresh Goyal, Director Jagvinder Singla, Asha, Councillor Dharam Singh, Kalu Ram, Jyoti Bansal, MC Ramchandra Maurya, Sanjay Bhadad, Prem Jangra, Dinesh Saini, Vinod Bhukkal, Ramphal Ranga, Purushottam Gupta, Ransingh, Pramod Sivaj, Rakesh Bansal, Satyawan Balak, Sarpanch Vijay, Sarpanch Sonu, Ved Prakash, Prominent Social Worker Mahendra Setia, officers of PWD department including other distinguished citizens were present.

The Department of Telecommunications (DoT) has mandated SIM Binding for app-based communication services using Indian mobile numbers. Under this framework, user accounts must remain linked to an active, KYC-verified SIM/eSIM. The measure aims to curb cyber fraud, digital arrest scams, phishing, impersonation, and misuse of Indian mobile numbers.

Key Dates

- 28 November 2025: DoT issued SIM-binding directions.
- 31 December 2026: Compliance deadline for messaging platforms.
- 1 January 2027: SIM-binding rules

Today's Cybersecurity Thought SIM Binding for Messaging Apps Becomes Operational from 1 January 2027

expected to become operational.

What is SIM Binding?

SIM Binding requires messaging accounts to remain continuously linked to the SIM card used during registration. Unlike the current system, verification will not be a one-time process.

Requirements:

- Registered mobile number must remain linked to an active SIM/eSIM.
- The SIM should be present in the device running the application.
- Removal, deactivation, or replacement of the SIM may restrict account access.

Apps Covered

- WhatsApp

- Telegram
- Signal
- Snappchat
- JioChat
- ShareChat
- Josh
- Arattai

Impact on Users

- Accounts may stop working if the registered SIM is removed or becomes inactive.
- Wi-Fi-only use without the registered SIM may be restricted.
- Multi-device users (web, tablet, desktop) may face additional verification requirements.
- Indian users abroad may need to keep their registered SIM/eSIM active.

Expected Benefits

- Better traceability of messaging accounts.
 - Reduced cross-border cyber fraud.
 - Stronger support for cybercrime investigations.
 - Prevention of misuse of Indian telecom identifiers.
- From 1 January 2027, users of WhatsApp, Telegram, Signal and other covered messaging platforms may need to keep their registered KYC-verified SIM/eSIM active and linked to their device to continue using these services. The measure is intended to enhance accountability, cybersecurity, and fraud prevention in India's digital ecosystem.

The box of fate of candidates will open on 27th October

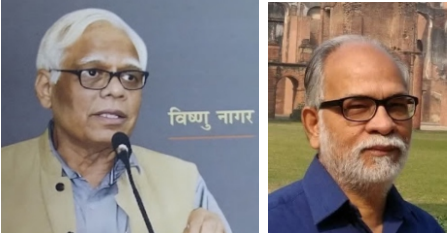

Parivahan Vishesh News

Gorakhpur. After completion of voting for Gorakhpur-Faizabad Khand Teacher Election, ballot boxes of 200 polling stations of 17 districts have been kept safely sealed in strong room made in Commerce Faculty of Deendayal Upadhyay Gorakhpur University. Security forces are deployed outside strong room and are

continuously monitoring. * In voting held on 23rd October, out of total 54,910 voters, 43,433 teachers cast vote, which was 79.1 percent. After voting, all ballot boxes were brought to university amid security arrangement. Now on 27th October, strong room will be opened under tight security and counting will be done. Only after counting it will be decided that on which candidate teacher voters have shown trust.

Political Satire Gathering

Parivahan Vishesh News

(Article: Rajendra Sharma)

1. Lie and Hypocrisy: Vishnu Nagar The tremendous wave of protest going on in India at this time, Narendra Modi and Mohan Bhagwat are equally scared by it, because both have same interests. One is crippled without other. After Narendra Modi, now Bhagwat ji is clearly saying that we have to be careful about agitations. These agitators have started appearing destructive to them, while at this turn agitation is going on peacefully. They say that these forces want to increase division in society. Are using them as political weapon. This talk from mouth of those whose own record has been of spreading hatred in country, sounds hypocritical and ridiculous. Bhagwat ji says in his Dussehra address that situations don't change by changing government. Oh is it such thing? Who will tell them that in these twelve and a half years after they came to power, situations have changed extremely, have become worse than before in every sense. Under leadership of Anna Hazare, Sangh and BJP had only played game of change of power and in that they were also successful and now they are preaching that situations don't change by changing government! There is no answer, no limit to their hypocrisy and lie! Every sentence of theirs is wrapped in cloak of lie and hypocrisy. The total meaning of their verbosity is this that let what is going on, go on. That is why Modi has praised Bhagwat ji's yesterday's speech by tweeting. And pay attention to one-two more things. Always they remain worried about increasing division in society. They don't say whose society they are talking about, but everyone understands that they mean Hindus. They have been spreading this lie for hundred years that Hindu society is one. No religious community ever remained completely one, nor can ever be one. In Hindus, there is such long tradition and layers of

discrimination, high-low, insult, belittling that perhaps hardly in any other religious community. Anyway unity of any religious community is very big lie because no community is only religious. It also has many kinds of interests and clash of interests also happens. If talk of 'Hindu unity' were true, then Sangh would not have to make its so-called Hindu unity against Muslim community as its base. Especially in these twelve and a half years, lie of their unity has been exposed so much that Sangh and BJP are scared, because the wax palace of anti-Muslim Hindu unity which they had erected, has caught fire. It has started burning fiercely. One lie they have also tried to spread that behind what is happening today, there are foreign forces. If so, then which are those forces? Just name them and you have government, if this is true, then put facts forward. Anyway spokesperson of Ministry of External Affairs said only yesterday that government has no information of foreign money being received by these agitators. Anyway America, Israel are your firm friends too. Russia is not your enemy, is friend and it itself is stuck in war. China has grabbed our land, still you are eager to increase friendship with it. On other side whole Europe itself is burning fiercely in fire of protest. France, Spain, Italy, Belgium, Portugal, Albania, Serbia all are burning and this fire is more worrying for governments of those countries than fire of protest in India. Violence is also happening there. (Many awards honoured Vishnu Nagar is littérateur and independent journalist. He is also National Vice President of Janwadi Lekhak Sangh.)

2. Modi-JP Dialogue: How is my Emergency blacker than their Emergency!

(Article: Rajendra Sharma)

There is a big advantage of heavenly people. Nobody can harm them. Neither fire can burn, nor water can wet, nor sword can cut, etc. thing was perhaps said for heavenly people only. Jail cannot scare, just add this much more, for sake of updating for new India. And Modi ji made mistake here only. Unnecessarily teased Jayaprakash Narayan alias JP, who even till he had not become heavenly, did not fear jail etc. Date was 11th October -- unprecedented fortification of Jantar Mantar, after thousands of people being badly beaten with police lathis in attempts to breach that fortification, taken into custody and same treatment being done fiercely with journalists also, very next day. Early morning Modi ji did Happy Birthday, till then JP also remained silent with 'yes okay, okay' gesture. But as soon as Modi started saying -- 'Your fearless voice in Emergency period...' JP stopped him by raising hand and almost scolding said -- What Emergency-Emergency you have kept chanting. What do you know about Emergency? If you had ever seen face of jail in Emergency or before or after it, then you would not have at least so much craze for putting others in jail. Before Modi ji could say anything, JP lodged another complaint -- and where is this manner, first made Bapu hold broom and left him as cleaning inspector and now have come to make me staunch enemy of Indira on pretext of Emergency. When you forgot Bapu himself who gave freedom to country while saying Father of Nation, then what respect will you people do of Bapu's soldiers like me. What do you think that all people are just napkins for your use, as you wanted you tore...

Delhi University's Yuva Sangam Phase-7 team flagged off for Tamil Nadu.

Parivahan Vishesh News

Report Dr Manoj Kain Presenter Special Correspondent Parivahan Vishesh

Yuva Sangam Phase-7 team affiliated to Delhi University gathered in premises of Gandhi Bhawan on Saturday.

From here a 56-member team for Central University Tamil Nadu was flagged off by chief guest Director of South Campus Prof. Rajni Abbi and officials of Ministry of Education. On this occasion Shriyansh Mohan, Ministry of Education, Dr. Naresh Grover, Director (AICT) Shri Jai Singh Director Ministry of External Affairs and Nodal Officer DU Yuva Sangam Phase-7 Prof K.P. Singh etc. were present. Youths raised enthusiasm-filling slogans - Yuva Sangam is our pride, this is our identity, no caste, no creed, this is companionship of Yuva Sangam, different languages, different attires, Yuva Sangam one message, from Kashmir to Kanyakumari, Yuva Sangam heaviest, one youth hundred thoughts, this is publicity of Yuva Sangam, hand in hand, youth together with Yuva Sangam, Yuva Sangam will do wonder, will change condition of India, unity in diversity, this is specialty of India, Ek Bharat Shreshtha Bharat, this is our slogan, this is lovely dream, etc. slogans made Delhi University resound. Students raised slogans for about half an hour in Gandhi Bhawan. "Ek Bharat Shreshtha Bharat" is an important initiative of Government of India. Chief Patron of DU Yuva Sangam Phase-7 Vice Chancellor Professor Yogesh Singh and Registrar Dr. Vikas Gupta also gave their best wishes for this safe and pleasant journey and said that unity in diversity, this is specialty of India. This team will tour state under leadership of Central University Tamil Nadu from 24th October to 2nd November. On this occasion principals, deans, directors and teachers of various departments, colleges were present. Before seeing off Yuva Sangam team, officials of Ministry of Education and Shriyansh Mohan, Naresh Grover in their address said that under National Education Policy it is medium to connect youth with their culture, literature and society. They told that Ek Bharat, Shreshtha Bharat is an important initiative of Government of India, whose objective is to promote mutual understanding and unity among diverse cultures, languages, traditions and life styles of country. This program is to make people of various states familiar with each other's culture, art, literature and traditions. They also said that our students are giving better results in every field, are participating increasingly in education, sports, cultural programs also. Nodal Officer of "Ek Bharat-Shreshtha

Bharat" program, Director of Gandhi Bhawan Prof K.P. Singh said that such programs strengthen feeling of national unity, brotherhood, harmony and patriotism. This initiative is making important contribution in progress and prosperity of nation by realizing Indian ideal of unity in diversity. Under "Ek Bharat-Shreshtha Bharat" initiative by Ministry of Education, Government of India, Yuva Sangam program has been organized for past several years. Objective of this organization is to develop feeling of national unity, cultural understanding and mutual cooperation among youth of country. Through this program students of various states and union territories get opportunity to understand culture, language, food, attire, historical places and development and innovation activities of other states. He told that under this program a team of 56 members from Delhi University (50 students and 6 teachers) will tour various academic, cultural and religious important places of Central University Tamil Nadu from 24th October to 2nd November. Joint Director of Gandhi Bhawan Prof Hansraj Suman told that youth will get opportunity to better understand, appreciate diversity and unity of India through one week educational and cultural journey. This program is focused on five pillars 5 Ps --- Paryatan, Parampara, Pragati, Paraspar Sampark and Prodyogiki (Tourism, Tradition, Progress, Mutual Contact and Technology). Goal is to complete this program as per vision and guidelines of Ministry of Education. He told that these students of ours will get opportunity to know shared culture, literature and language etc. of India. Let it be known that in this team students of various colleges of DU, DTU, JNU, Ambedkar University, JMI, IP University, NSUT etc. universities are participating. Who will remain on tour with students for whole week.

All preparations completed for huge annual fair at Agroha Dham on 25th October - Bajrang Garg
