From 1st November, Revised GRAP Rules Implemented in Delhi - Ban on Entry of Non BS-VI Vehicles

Parivahan Vishesh News

Strictness under Environment Department Notification dated 23.06.2026 - Only BS-VI, CNG, Electric Allowed

Report: Special Correspondent, Parivahan Vishesh News Paper

Main Facts:-

Applicable Date: From 01.11.2026 to 31.01.2027 (Winter Pollution Control)- Notification: Environment Department, Delhi Government, 23.06.2026-Traffic Helpline: 011-25844444 / 1095, Emergency Police Assistance: 112

Which vehicles can run (Permitted):

- BS-VI standard vehicles, CNG, Electric vehicles
- Vehicles exempted in notification - subject to applicable rules

Which vehicles will not be able to run (Restricted):

- Vehicles below BS-VI standard - Not allowed to enter Delhi
- Any vehicle without valid PUC - Even BS-VI vehicles

ALL VEHICLE DRIVERS PLEASE PAY ATTENTION

Regarding entry/operation restriction of Non-BS-VI vehicles from 01.11.2026 under Environment Department Delhi Govt Notification (Dated 23.06.2026)

<p>1 Vehicles below BS-VI standard: Such vehicles are not allowed to enter Delhi</p> 	<p>2 Permitted Vehicles: BS-VI, CNG and Electric vehicles can enter Delhi as per prescribed rules and exemptions</p> 	<p>3 Buses from other states: Buses below BS-VI standard cannot enter Delhi</p> 	<p>4 Trucks passing through Delhi: Trucks whose destination is not Delhi should use Eastern or Western Peripheral Expressway or other alternative routes instead of entering Delhi</p> 	<p>5 Tractor and Jugaad vehicles: Entry of such vehicles in Delhi will not be allowed as per applicable restrictions</p> 
---	---	--	--	---

Which vehicles CAN run?

1 BS-VI vehicles & CNG/Electric and vehicles exempted in the notification can run, subject to applicable restrictions.

BS-VI | CNG | Electric

Which vehicles CANNOT run?

- Outside Delhi registered vehicles:** From 1 November 2026 to 31 January 2027, entry/operation of trucks/vehicles in Delhi other than CNG, Electric and BS-VI emission vehicles is restricted.
- Even BS-VI vehicles cannot enter Delhi without PUC.
- (Non-Destination Vehicles)** Goods vehicles whose destination is not in Delhi: Instead of entering Delhi, they should use Eastern or Western Peripheral Expressway or other alternative routes.
- Entry of inter-state diesel buses with emission standard below BS-VI coming from other states remains restricted in Delhi.

<https://www.facebook.com/dtptraffic> | <https://twitter.com/dtptraffic> | <https://www.instagram.com/dtptraffic> | 8750871493 पर हमें कॉल करें | ट्रैफिक प्रहरी बनें |

will not be allowed to enter without PUC

3. Inter-state buses of other states below BS-VI standard - Entry restricted4. Non-destination trucks - Trucks whose destination is not Delhi should use Eastern/Western Peripheral Expressway or alternative routes5. Tractors and Jugaad vehicles - No entry as per applicable restrictions

Public Interest Appeal: Check eligibility of your vehicle before traveling, keep PUC updated, and follow official advisory of Delhi Traffic Police.

Editorial Comment: Purpose of GRAP is air pollution control. Commercial vehicle drivers should plan slots and alternative routes in advance to avoid jams and challans.

Rain Washed Away Pollution, Then Why Sword on BS-IV Taxis?

Govt Should Not Blacken Diwali - Question of Livelihood of Lakhs of Families

1. Rain Became a Boon

- AQI 300+ to 150-180
- Improvement in air quality in Delhi-NCR

2. Crisis on Livelihood

- 1.5 Lakh Taxi Drivers Affected
- 35,000 Buses at Risk
- 6-7 Lakh Families Livelihood at Stake

3. Demands

- Allow BS-IV to run with PUC fitness
- Scientific review of GRAP IV demanded
- Immediate relief package should be released

4. Appeal

- Don't make Diwali black
- Save employment of lakhs in festive season
- Give relief to public and drivers

Parivahan | Parivahan Vishesh • Impartial • Trustworthy

Parivahan Vishesh News

Rain washed away pollution, then why sword on BS-IV taxis? - Government should not make Diwali black Proposal to ban tourist buses despite improvement in AQI - Delhi Taxi Association appeals to CM Rekha Gupta and CAQM

Report - President, Delhi Taxi and Tourist Transporters Association (Regd.) Presenter: Special Correspondent, Parivahan Vishesh News Paper

Lead: While the recent rains in Delhi have provided relief from toxic air and a huge improvement in AQI has been recorded, once again dark clouds of crisis are hovering over the transport world. The proposed ban on BS-IV diesel tourist taxis and vehicles below BS-VI from 1st November 2026 is on the verge of blackening the Diwali of lakhs of families.

Main Points:

1. Rain became a boon: After continuous rains, Delhi's AQI has come down from 300+ to the level of 150-180. It is a scientific fact that PM2.5 and PM10 are washed away by rain. In such a situation, imposing a ban only on the basis of calendar is unscientific - President, Delhi Taxi and Tourist Transporters Association.

2. Crisis on livelihood: In Delhi-NCR, about 1.5 lakh tourist taxis, 35 thousand tourist buses, RTVs and maxi cabs are in BS-IV category. Each vehicle supports 3-4 families - i.e. directly the livelihood of 6-7 lakh families. Sudden stoppage of operation will sink everything - bank EMI, insurance, permit fees, drivers' salaries.

3. Clear demand of the organization:- Permission to operate BS-IV diesel tourist taxis and buses in Delhi should continue. Scientific review of proposed GRAP-IV restrictions on vehicles below BS-VI should be done. Relief letter has also been sent to the Chairman of CAQM - Chief Minister Mrs. Rekha Gupta

ji should be given time for immediate meeting of the delegation.

4. Editorial comment: We are not against pollution control, but balance between environment and employment is necessary. The objective of GRAP is to reduce pollution, not to make poor transporters unemployed. When the air has already become clean due to rain, the government should adopt a humanitarian approach. Stopping tourist vehicles during tourist season, Chhath, Diwali will also break Delhi's tourism economy.

Appeal: Government should not blacken the Diwali of lakhs of drivers. Let BS-IV vehicles run on the basis of PUC, fitness and take the decision of ban only after seeing the actual status of AQI.

Meaningful talks on transport demands at Chandigarh Raj Bhavan - Governor gave positive assurance

Parivahan Vishesh news

7-member delegation of Bharatiya Parivahan Mazdoor Mahasangh met Governor Shri Gulab Chand Kataria at Chandigarh Raj Bhavan. Report: Special Correspondent, Parivahan Vishesh News Paper
Detailed Description: Under the leadership of All India General Secretary of Bharatiya Parivahan Mazdoor Mahasangh, Shri Raju Bhalerao, a 7-member delegation today met His Excellency Governor Shri Gulab Chand Kataria at Chandigarh and held talks on pending demands of Chandigarh Transport. Key points of discussion: Purchase of new buses in Roadways Implementation of promotion channel for

drivers Purchase of new vehicles from Rs. 20 crore lapsed earlier Reinstatement of 20 conductors whose services were terminated a year ago New recruitment on vacant posts The Hon'ble Governor assured prompt positive action. He also congratulated and extended best wishes to Bharatiya Mazdoor Sangh on its victory in the union recognition election in Chandigarh Transport. Present in the delegation: Raju Bhalerao (Maharashtra), Subhash Verma (Himachal), Satyanarayan Sharma (Rajasthan), Sanjay Pandit (Delhi), Jassa Singh (Chandigarh), Balwinder Singh (Chandigarh), Azad Singh (Chandigarh).

Lessons for Cybercrime Enforcement and Public Safety South Korean authorities have taken action against 80 Tesla owners accused of illegally enabling Tesla's Full Self-Driving (FSD) feature through unauthorized hardware and software modifications, a practice commonly known as "jailbreaking." During the investigation, police also seized 21 illegal activation devices. The case highlights how cyber techniques, open-source tools, online communities, and hardware manipulation can be used to bypass manufacturer-imposed security and regulatory controls. Why is "Jailbreaking" Important in This Context? "Jailbreaking" refers to removing or bypassing software restrictions imposed by a manufacturer. In this case, Tesla owners allegedly: • Used unauthorized hardware modules imported from Europe and China. • Developed their own devices using technical information available online. • Utilized open-source code and information shared on platforms such as GitHub. • Employed methods designed to conceal traces of unauthorized activation from vehicle records. Modus Operandi Investigators found that: 1. Individuals purchased FSD activation devices from overseas markets. 2. Some technically skilled users built their own devices using publicly available technical information. 3. These devices were connected to Tesla vehicles to bypass regional software restrictions. 4. Online communities shared information on: o Activating restricted FSD features. o Modifying vehicle software. o Hiding changes and avoiding detection by deleting logs or records. Why Authorities Considered It Dangerous According to South Korean investigators, unauthorized activation of FSD may create significant safety risks because: • The system may fail to properly recognize local road and traffic conditions. • Vehicles may behave contrary to driver expectations. • Required safety certifications and regulatory approvals are bypassed. • Manufacturer-designed security controls are undermined. Cybercrime and Cybersecurity Dimensions This

Today's Cybersecurity Thought Tesla Full Self-Driving (FSD) Jailbreaking" Case in South Korea

Parivahan Vishesh news

Lessons for Cybercrime Enforcement and Public Safety South Korean authorities have taken action

incident demonstrates the growing convergence of cyber and physical security issues: 1. Vehicle Hacking Modern vehicles are software-driven systems. Unauthorized modifications to electronic control systems can be comparable to hacking protected digital infrastructure. 2. Open-Source Abuse Legitimate open-source tools and publicly available technical resources can be misused to circumvent security controls. 3. Online Criminal Ecosystems Online forums and communities may facilitate: • Sharing of exploit techniques. • Distribution of unauthorized tools. • Use of anti-forensic methods to evade detection. 4. Supply Chain Risks Unauthorized hardware imported from foreign markets may introduce: • Malware infections. • Backdoor access. • Vehicle security vulnerabilities. 5. Digital Evidence Challenges The sharing of techniques to erase or prevent logs from being generated presents an emerging challenge for cyber investigations and digital forensics. Key Lessons for Law Enforcement Monitoring Emerging Cyber-Physical Threats Connected vehicles are increasingly becoming targets for software manipulation and feature unlocking Importance of OSINT (Open-Source Intelligence) Investigators reportedly relied on online posts, discussion communities, and digital communications to identify suspects. Need for Technical Expertise Vehicle cybersecurity investigations require expertise in: • Embedded systems. • Automotive software. • CAN Bus networks. • Digital forensics Public Awareness Consumers should understand that bypassing security controls in smart devices, vehicles, or software products may not only violate the law but also create serious safety risks. Cyber Safety Advisory Be cautious of online communities promoting software bypass techniques. Do not install unverified vehicle modifications. Avoid purchasing unauthorized activation tools online. Use only manufacturer-approved software and hardware updates. Report suspicious software-modification services to the relevant authorities. "In the era of connected vehicles, hacking for convenience can quickly become a threat to safety. Bypassing digital safeguards is not merely a violation of rules; it can put human lives at risk."

Given the continuous support and cooperation that Parivahan Vishesh Newspaper has received from all of you over the past three years, and considering its growing role in amplifying your voice day by day, the management of Parivahan Vishesh Newspaper and Transport Vishesh News Limited have decided to launch the public's own channel, **'Parivahan Vishesh News Doordarshan,'** from the month of October. The objective of this initiative is to deliver public interest news, public welfare information, public awareness, and important updates more rapidly and effectively to the Government of India, various State Governments, and all political organizations before anyone else.

Get Ready — We're Coming Soon!

**PARIVAHAN VISHESH
NEWS DOORDARSHAN**

Great News! Now your voice will resonate across the entire world.
After 3 successful years of the Parivahan Vishesh Newspaper—now, a new revolution!

We hope that just as you have supported and contributed to taking "Parivahan Vishesh Newspaper" to great heights in today's era, in the same way, you will continue to support "Parivahan Vishesh News Doordarshan," which is being launched to become the voice of the people, and help us make it the world's largest news.

Discovering Medicines Within the Human Body: The Amazing Secrets of Microorganisms

Parivahan Vishesh News

Dr. Vijay Garg

Discovering Medicines Within the Human Body: The Amazing Secrets of MicroorganismsDr. Vijay GargThe human body is not merely a collection of organs, tissues and cells. It is also home to trillions of microorganisms that live on our skin and inside our digestive system, particularly the intestines. These microscopic organisms, including bacteria, fungi and viruses, form a complex community known as the human microbiome. Although some microorganisms cause diseases, many others perform essential functions that support our health. Scientists are now exploring an exciting possibility: these tiny inhabitants may also help us discover new medicines.The Hidden World Within UsThe human intestine contains an enormous variety of microorganisms. Collectively, they are known as the gut microbiome. These organisms help digest certain food components, produce useful substances, support the immune system and protect against harmful microbes.One of the most fascinating features of these microorganisms is their ability to produce a wide range of chemical compounds. Some of these substances help them communicate with one another, compete for nutrients or defend their living space against rival organisms.Scientists believe that this chemical diversity may provide valuable clues for developing new medicines. Compounds produced by intestinal microorganisms could potentially inspire treatments for infections and other diseases.Nature's Microscopic Chemical FactoriesMicroorganisms have been producing biologically active compounds for millions of years. In nature, these substances often help microbes survive, compete and adapt to changing environments.The discovery of antibiotics illustrates the importance of this microscopic chemical world. Penicillin, discovered by Alexander Fleming in 1928, originated from a mould rather than bacteria. Many other antibiotics have also been obtained from microorganisms found in soil and other natural environments.Research into the human microbiome extends this search to the microorganisms living within us. Scientists are investigating whether gut bacteria produce previously unknown compounds that can inhibit harmful pathogens or influence biological processes in the human body.For example, some intestinal bacteria produce bacteriocins, which are antimicrobial substances that can inhibit particular bacteria. Other

microbes generate short-chain fatty acids, such as butyrate, which help support the health of intestinal cells and influence immune functions. Although these substances are not all medicines, they demonstrate the remarkable chemical capabilities of our microbial partners.The Search for New AntibioticsAntimicrobial resistance is one of the most serious challenges facing modern medicine. Some disease-causing bacteria have developed resistance to existing antibiotics, making infections increasingly difficult to treat.Researchers are therefore searching for new antimicrobial compounds from diverse sources, including the human microbiome. Certain gut bacteria naturally produce substances that suppress competing microbes. Understanding how these substances work may help scientists develop new approaches to preventing or treating infections.However, finding a promising compound is only the beginning. Scientists must identify its chemical structure, determine how it works, evaluate its effectiveness and investigate possible toxicity. Extensive laboratory studies and clinical trials are necessary before a candidate can become an approved medicine.Microorganisms and Personalised MedicineThe gut microbiome differs from one person to

another. Diet, age, environment, medications and lifestyle can all influence its composition.These differences may help explain why people sometimes respond differently to the same treatment. Researchers are studying how intestinal microorganisms influence the breakdown and activity of certain medicines, including whether microbial enzymes can activate, inactivate or alter particular drugs.In the future, analysing an individual's microbiome may help doctors make better-informed treatment decisions. Scientists are also exploring microbiome-based therapies, including carefully selected beneficial bacteria and faecal microbiota transplantation for certain conditions, such as recurrent Clostridioides difficile infection.Nevertheless, microbiome research is still developing. Personalised treatment based on routine microbiome testing is not yet established for most diseases.From Discovery to MedicineTurning a microbial chemical compound into a useful medicine requires a systematic scientific process.First, researchers collect and study microorganisms using modern laboratory techniques and genetic analysis. They then identify potentially useful compounds and test their biological activity. Promising candidates undergo further investigations to establish their

safety, dosage, effectiveness and possible side effects.Modern technologies, including genome sequencing, artificial intelligence and advanced chemical analysis, are helping scientists identify microbial compounds more efficiently. Genetic information can reveal the potential of microorganisms to produce substances that have not yet been discovered or studied.Yet many challenges remain. Some microorganisms are difficult to grow in laboratories, some compounds are produced only under particular conditions, and a substance that works in a laboratory may not be effective or safe in humans.Protecting Our Microbial PartnersThe possibility of discovering medicines within the human microbiome also highlights the importance of maintaining a healthy relationship with our microorganisms.A balanced diet rich in dietary fibre, adequate sleep, physical activity and appropriate medical care can support general health and the normal functioning of the gut microbiome. Antibiotics should be used responsibly and only when medically indicated, because unnecessary use can disrupt microbial communities and contribute to antimicrobial resistance.People should not attempt to treat diseases with unverified microbial products or take antibiotics without professional guidance. The presence of beneficial bacteria does not mean that every microorganism or microbial supplement is safe.ConclusionThe human body contains a fascinating microscopic world whose chemical potential is only beginning to be understood. Intestinal microorganisms do much more than assist digestion: they produce biologically active substances, interact with our immune system and influence our responses to certain medicines.As microbiology, biotechnology and artificial intelligence advance, these tiny organisms may help scientists identify new antimicrobial agents and develop innovative treatments. However, every promising discovery must pass rigorous scientific testing before it can be used safely in patients.The future of medicine may depend not only on searching forests, oceans and laboratories for new drugs, but also on understanding the extraordinary chemistry of the microorganisms that live within us.Sometimes, the smallest inhabitants of the human body may offer some of the biggest opportunities for medical discovery.

Parivahan Vishesh News

Dr. Vijay Garg

Diwali is one of the most popular and joyous festivals in India. It symbolizes the victory of light over darkness, knowledge over ignorance, and good over evil. On this occasion, homes are decorated with traditional lamps, colourful lights, rangoli designs, and flowers. Families and friends exchange sweets and gifts, sharing happiness and strengthening relationships. However, amid these celebrations, we must remember that our traditions become truly meaningful when they also reflect our responsibility towards nature and the environment. Today, Diwali celebrations are increasingly accompanied by problems such as air pollution, noise pollution, plastic waste, and the excessive use of natural resources. Therefore, we need to preserve the spirit of the festival while making our celebrations environmentally responsible. Firecracker Pollution and Its Impact on Health Burning firecrackers releases smoke, fine particulate matter, and harmful gases into the atmosphere. These pollutants can deteriorate air quality and create health problems, particularly for children, older adults, and people with respiratory conditions. The loud noise of firecrackers also causes distress to people and animals, while birds may become frightened and disoriented. We must understand that the happiness of a festival should never come at the expense of another person's health and peace. Instead of firecrackers, we can celebrate with traditional oil lamps, cultural programmes, family gatherings, music, and community activities. Such celebrations can create lasting memories without placing an unnecessary burden on the environment. Traditional Earthen Lamps and Indian Culture The true beauty of Diwali lies in the gentle glow of traditional earthen lamps. Purchasing diyas made by local potters supports traditional

craftsmanship and provides economic opportunities to small artisans. Homes can also be decorated with flowers, leaves, and reusable decorative materials. However, environmental protection involves more than simply lighting earthen lamps. We should use oil and wicks wisely, conserve electricity, reuse decorations, and dispose of waste responsibly. Energy-efficient LED lights can help reduce electricity consumption when used thoughtfully and for limited periods. Cleanliness and Waste Management Cleaning homes and surroundings before Diwali is an old and cherished tradition. Yet cleanliness should not be restricted to our houses. Streets, neighbourhoods, parks, and public spaces deserve equal attention. We should avoid plastic bags, thermocol decorations, and disposable items wherever possible. Gifts can be wrapped in reusable cloth or recyclable paper. Buying sweets and food according to actual needs can help prevent unnecessary waste. Safe surplus food can also be shared with people who need it. After the celebrations, firecracker remnants, paper, plastic, and other waste should be collected and disposed of properly rather than being left on roads or in public places. The true spirit of cleanliness is reflected in our willingness to take responsibility for the spaces we share. Teaching Children to Protect the Environment Children learn many of their habits by observing their families and communities. When parents celebrate an environmentally responsible Diwali, children are more likely to develop respect for nature. Schools can organise essay-writing competitions, poster-making activities, speeches, and awareness campaigns on the theme of a green Diwali. Such activities can help students understand the connection between festivals, public health, and environmental sustainability. Children should also learn that festivals are not merely about shopping and fireworks. They are opportunities to express love, kindness, cooperation, and social harmony. Helping

disadvantaged families, spending time with older people, and showing compassion towards animals and birds can make Diwali more meaningful. Simple Steps Towards an Eco-Friendly Diwali We can make this festival more responsible by adopting a few practical measures:- Avoid firecrackers to reduce air and noise pollution.- Purchase earthen lamps and support local artisans. - Save electricity and switch off unnecessary decorative lights.- Avoid plastic and disposable decorative materials.- Prevent food waste and share happiness with those in need.- Collect and dispose of festival waste responsibly.- Care for trees and plants and encourage environmental awareness. - Teach children the importance of celebrating festivals without harming nature. These small steps, when adopted by families, schools, neighbourhoods, and communities, can collectively make a significant difference. Conclusion Diwali is not merely a festival of lighting lamps; it is an opportunity to bring light, harmony, and positivity into our lives. If our celebrations damage the environment, we must reconsider the way we celebrate. A truly meaningful festival is one that respects human well-being, protects animals and birds, preserves nature, and safeguards the interests of future generations. Let us resolve to make this Diwali a celebration of light without pollution, happiness without waste, and traditions accompanied by responsibility. Let us light earthen lamps, bring smiles to the faces of those in need, and choose practices that protect our shared environment. Light lamps of happiness, drive away pollution. Preserve our traditions, protect our environment, and make every Diwali a celebration of compassion, cleanliness, and sustainability.

The Age of Sweets: Balancing Taste, Tradition and Health

Parivahan Vishesh News Paper | October 2026 | Public Interest • Fearless • Impartial

The Age of Sweets: Balancing Taste, Tradition and Health

TRADITIONAL SWEETS • FESTIVE & CULTURAL

Sugar Intake - High
Dental Health Risk
Obesity Concern

BALANCE IS KEY

HEALTH TIP: Enjoy sweets in small portions • Pair with nuts/fruit • Stay active

HEALTHY BALANCE • MODERATION & WELLNESS

Choose Fresh Fruits
Nuts & Dates Natural Sweetness
Balanced Lifestyle

Dr Vijay Garg • Retired Principal, Eminent Scientist • Malout Punjab -152107

Limit Added Sugar • Prefer Natural Sweets • Daily Movement

Parivahan Vishesh News

Dr. Vijay Garg

Sweets have always occupied a special place in human life. From festivals and weddings to birthdays and family celebrations, sweets are closely associated with happiness, love and togetherness. In India, sweets are not merely food items; they are an important part of our culture, traditions and hospitality. However, in the modern age, excessive consumption of sweets has become a growing health concern.

Today, the availability of sweets has increased tremendously. Traditional Indian delicacies such as laddoos, jalebis, gulab jamuns, rasgullas and barfis share space with chocolates, cakes, pastries, ice creams and numerous packaged desserts. Attractive advertisements, changing lifestyles and easy availability encourage people, particularly children, to consume more sugar than their bodies need.

Sugar provides quick energy, but excessive consumption can have serious consequences. Regular intake of sugary foods and beverages increases the risk of obesity, type 2 diabetes, dental

problems and metabolic disorders. It may also contribute to cardiovascular health problems over time. Children who frequently consume sugary snacks may develop unhealthy eating habits that continue into adulthood.

Another concern is hidden sugar. Many packaged foods, breakfast cereals, biscuits, flavoured drinks, sauces and processed snacks contain added sugars. Consumers often overlook these ingredients because the products are marketed as convenient or healthy. Reading food labels carefully is therefore essential.

The solution is not to completely eliminate sweets from our lives but to develop moderation and awareness. Traditional sweets can be enjoyed occasionally in smaller portions. Fresh fruits, dates and naturally sweet foods can provide satisfying alternatives. Families should encourage children to develop healthy eating habits rather than using sweets as regular rewards.

Parents and schools have an important role in promoting nutritional awareness. Children should understand the difference between natural sugars found in

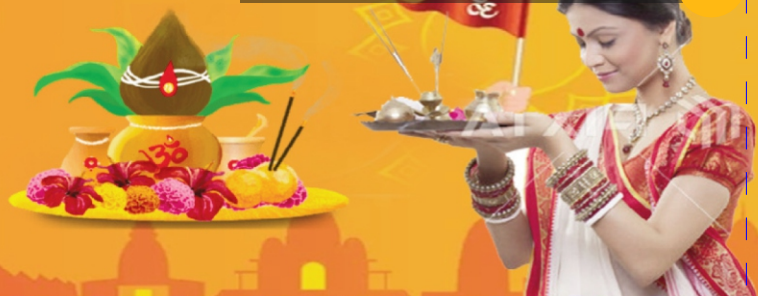

processed foods. Schools can encourage healthy celebrations with fruits, nuts and homemade snacks.

Food manufacturers must also take responsibility by reducing unnecessary added sugar and providing transparent nutritional information. Governments and public health organisations should strengthen awareness campaigns about excessive sugar consumption.

Our traditional food culture deserves respect, but traditions should evolve with scientific understanding. Celebrations need not depend on large quantities of sweets. Happiness comes from relationships, shared experiences and good health, not simply from sugary food.

The message is simple: enjoy sweets, but do not become dependent on them. A healthy society is one that knows how to balance taste with nutrition. Let us make sweetness a part of our celebrations, not a burden on our health.

One Resolution on Diwali: Light lamps not just in the house, but also in relationships.

Parivahan Vishesh News Paper | October 2026 | Public Interest • Fearless • Impartial

One Resolution on Diwali: Light lamps not just in the house, but also in relationships.

The real light of Diwali is with family, because a home is made not of walls, but of relationships

MODERN DISTANCE

Satyam Mishra • Social Media Specialist Uttar Pradesh / Uttarakhand

FAMILY TOGETHER — THE HEART OF DIWALI

RECONNECT & CARE

Parivahan Vishesh News | Article: A Social Perspective

Parivahan Vishesh News

The real light of Diwali is with family, because a home is made not of walls, but of relationships

Article: A social perspective

Diwali is not just a festival of lighting lamps, decorating homes and distributing sweets. It is also an opportunity to look within oneself, to understand relationships and to recognize the real importance of family in life. Every year when Diwali comes, streets light up with lights, markets become lively and there is an atmosphere of happiness in homes. But amidst this glitter, a question also arises — along with the light of lamps in our homes, is there still light left in relationships?Today's life has become more convenient than before. People have mobile phones, internet, many means of entertainment and all things that make life easier. But in the midst of this modernity, family members are having less and less time for each other. People living under the same roof sometimes become so busy in their own worlds that they cannot even take out time to listen to the feelings of their loved ones. In such a situation, Diwali reminds us that the real prosperity of a family lies not in expensive goods, but in mutual love, respect and affection.Family is not just the name of living together, it is a relationship of understanding each other.The foundation of a family is built on the sacrifice of parents, the experience of elders, the affection of siblings and the smile of children. Parents put their own desires behind and work hard throughout their lives for the future of their children. They make their own needs

smaller to make their children's dreams bigger. As they grow older, when they need support, respect and some time, that is when the real test of the family takes place.Buying new clothes on Diwali, decorating the house and giving gifts are good traditions, but do we sit with our parents and talk to them? Do we make our elders feel that they are still an important part of our lives? Do we teach our children that success does not only mean earning money, but also becoming a good human being?It is necessary to think on these questions.One purpose of festivals is also to connect broken relationships. If there is a rift in the family over some issue, Diwali can become an opportunity to move beyond it. Sometimes a small initiative erases years of distance. Calling a loved one, talking to an upset family member, asking for forgiveness if there is a mistake or asking about someone's well-being without any selfishness can also be a beautiful gift of Diwali.We also have to understand that the circumstances of every family are not the same. Some homes have financial difficulties, some families are suffering the pain of separation from loved ones and some people have forgotten their happiness under the burden of responsibilities. In such a situation, the meaningfulness of Diwali increases only when there is room for others in our happiness too. Helping a needy family, spending time with a lonely elderly person or giving hope to a disappointed person is as important as lighting a lamp.Children should inherit not just property, but also values.It is important to tell today's generation that having differences

in a family is not unusual, but losing respect for loved ones due to differences is not appropriate. Relationships do not always run on the effort of one person; they need communication, patience, trust and understanding of each other's feelings. The strength of a family does not depend on the fact that there are never disputes in it, but depends on whether people maintain respect for each other despite disputes or not.Diwali gives us the message of victory of light over darkness. To implement this message in our lives means — to remove the darkness of ego from the mind, to reduce bitterness from behavior and to light the lamp of trust in relationships. If along with cleaning the house, we can also clean our thoughts and behavior, then the meaning of the festival will become even deeper.Come, this Diwali let us not only decorate our homes, but also our relationships. Before giving expensive gifts to loved ones, give them your time. Choose communication before complaints, keep patience before anger and understand your duties before asserting your rights.Because ultimately the biggest capital of life is that family, among whom we can stay in our real form without any pretense.On this Diwali, take a resolution — definitely light lamps in the house, but do not let darkness remain in the mind of any loved one. Share happiness not just for yourself, but with your loved ones. Because the real light of a house is not produced by electric bulbs, but by the warmth of relationships.

Om Prakash Yadav becomes State President of Vishwa Sanatan Sansthanam, grand welcome and felicitation on his first arrival in Kashi

Parivahan Vishesh News

Executive Committee of Vishwa Sanatan Sansthanam expanded, new responsibilities assigned for propagation of Sanatan DharmaThe institute will run on the ideals of Adi Guru Shankaracharya and Swami Vivekananda, call to run campaign worldwide for propagation of Sanatan Dharma - Dr. Santosh Acharya(Santosh Kumar Singh)Varanasi: - A press conference was organized by Vishwa Sanatan Sansthanam on Monday, 26th October 2026 at Hotel Sylvania Palace located on Sandaha Ring Road, Chiraigaon Block. On this occasion, after Om Prakash Yadav, State General Secretary of Vishva Hindu Mahasangh, was made State President of Vishwa Sanatan Sansthanam, he was given a warm welcome and felicitation on his first arrival in Kashi. The office bearers and workers present in the program welcomed him and reiterated the resolve to propagate Sanatan Dharma and strengthen the organization.During this, newly appointed State President Om Prakash Yadav addressed the newly appointed office bearers and workers of Varanasi district and called upon them to work as vigilant sentinels for the upliftment, protection and promotion of Sanatan Dharma. He also gave necessary guidelines to take the objectives of the organization to the masses, to preserve the traditions of Sanatan culture and to accelerate organizational activities.Expansion of executive committee, many office bearers got new responsibilitiesWith the aim of making the organization more empowered, State President Om Prakash Yadav expanded his executive committee and announced new appointments on various posts. Under this, former State President of

Vishva Hindu Mahasangh, Nisha Thakur Chauhan, was appointed as Social Media In-charge of Uttar Pradesh, while Anand Ji Tandon was given the responsibility of Print and Electronic Media.Apart from this, companion of struggles Ram Prasad Yadav was given the responsibility of State Executive Member and District Patron, Prayagraj. Mathura resident Dr. Naveen Gupta and Mahoba resident Bhagwan Singh Yadav were nominated as State Vice

Presidents. The newly appointed office bearers were expected to actively work in accordance with the policies and objectives of the organization and propagate the ideology of Sanatan Dharma at a wide level.Call to follow the ideals of Adi Guru Shankaracharya and Swami VivekanandaDuring the press conference, Dr. Santosh Acharya, founding president of Vishwa Sanatan Sansthanam, emphasized on establishing the glorious tradition of Sanatan

Dharma, Indian culture and spiritual values worldwide. He called for propagating Sanatan Dharma all over the world under the leadership of the international patron of the institute, King Shri Niksh Shamsheer Jung Bahadur Rana of Nepal Nation, following in the footsteps of Adi Guru Shankaracharya and Swami Vivekananda. He said that all workers should work with dedication and unity to take the basic principles of Sanatan culture and spiritual message to the masses.Invitation to attend nine-day Ashtam Ashwamedha YagnaDuring the program, on behalf of International Mateshwari Parivar, National General Secretary Dharmanand Pandey gave information about the nine-day Ashtam Ashwamedha Yagna starting from 8th February on the holy bank of Mother Ganga in the city of Baba Vishwanath in Varanasi. He called upon all Sanatani brothers to participate in this religious event. He told that Vishwa Sanatan Sansthanam will play its role as a collaborator in this event.During the program, future plans of the organization, upliftment of Sanatan Dharma and expansion of organizational activities in various areas were also discussed. In the program, National Vice President Vimlesh Singh, State Organization Minister Kamta Prasad Pandey, State Vice President Manoj Jaiswal, State Vice President Vijay Kumar Pathak, State Executive Member Rohit Mishra, District President Ritesh Maurya and Metropolitan President Sudhakar Mishra along with a large number of office bearers and workers were present.The program concluded with a collective resolve to play an active role for the protection, promotion and wide propagation of Sanatan Dharma.

MONEY & RELATIONSHIP PREDICTION

Know Your Day • Protect Your Money • Strengthen Your Relationships

Parivahan Vishesh News

31 OCTOBER 2026 | Day vibration: 6 — Harmony, responsibility, relationships, care and material balance

Moolank 1

Money & Career: Day 6 asks your leadership energy to balance ambition with responsibility. Client relationships, team matters and long-term financial choices can improve when you lead with fairness rather than force.
Relationship: Warmth and commitment are highlighted. Take initiative in creating harmony, but avoid deciding what is best for everyone without asking.
Precaution: Avoid ego-based spending, controlling behaviour and taking on more responsibility merely to prove capability.
Make Your Day Better: Lead with care and make one decision that supports both progress and stability.

Moolank 2

Money & Career: Day 6 blends naturally with your sensitive and cooperative nature. Joint finances, client care or partnership matters can improve through patience, but practical boundaries remain important.
Relationship: Emotional closeness is supported. Express affection directly instead of waiting for reassurance or interpreting every small change in mood.
Precaution: Avoid emotional spending, dependency and sacrificing your own needs simply to keep peace.
Make Your Day Better: Nurture one important bond while keeping a clear and healthy boundary.

Moolank 3

Money & Career: Day 6 gives your creative and expressive energy a refined, people-focused direction. Presentation, design, teaching or client-facing work can benefit when quality is matched with sensible budgeting.
Relationship: Your charm and warmth can strengthen connection. A thoughtful compliment or pleasant shared moment will work better than an extravagant gesture.
Precaution: Avoid overspending on appearances, scattered commitments and making promises merely to please others.
Make Your Day Better: Use creativity to add value and warmth without losing financial discipline.

Moolank 4

Money & Career: Day 6 brings responsibility, service and financial balance to your practical nature. Review household or business expenses and strengthen systems that support long-term security.
Relationship: You may express love through duty and reliability. Add emotional warmth so care does not feel like a list of responsibilities.
Precaution: Avoid rigidity, overwork and carrying every family or professional burden alone.
Make Your Day Better: Create stability through one practical improvement and one sincere expression of appreciation.

Moolank 5

Money & Career: Day 6 asks your freedom-loving energy to honour commitments. New contacts and opportunities can be useful, but check whether they support your financial and personal responsibilities before saying yes.
Relationship: Variety can refresh a bond, yet reliability matters today. Keep promises and communicate changes instead of expecting others to adjust instantly.
Precaution: Avoid impulse buying, overindulgence and escaping responsibility through constant activity.
Make Your Day Better: Enjoy flexibility within a clear framework and complete one commitment before adding another.

Moolank 6

Money & Career: Your Moolank 6 strongly resonates with Day 6, amplifying harmony, responsibility, beauty, service and material comfort. Good for client work, family finances and value-based decisions when luxury stays within budget.
Relationship: Love, care and commitment are strongly highlighted. Create closeness, but remember that healthy love supports rather than controls.
Precaution: Avoid possessiveness, over-giving, comfort spending and expecting appreciation for every effort.
Make Your Day Better: Create harmony through thoughtful care and one financially sensible choice.

Moolank 7

Money & Career: Day 6 brings practical responsibility to your thoughtful nature. Review long-term expenses, client commitments or work-life balance and use your analysis to create a more sustainable plan.
Relationship: You may need quiet, while loved ones may seek closeness. Explain your need for space gently instead of becoming unavailable without explanation.
Precaution: Avoid withdrawal, perfectionism and analysing emotions instead of expressing them.
Make Your Day Better: Balance solitude with one sincere act of connection and care.

Moolank 8

Money & Career: Day 6 softens your ambitious energy with responsibility and service. Business, property or financial planning can benefit when long-term security and people are considered alongside profit.
Relationship: Your protective nature may become controlling if stress rises. Offer support, but allow the other person to make choices and share responsibility.
Precaution: Avoid work obsession, status spending and using money or authority to manage emotions.
Make Your Day Better: Use your strength to create security, not pressure, and protect one important relationship.

Moolank 9

Money & Career: Day 6 directs your generous nature toward responsible support. Complete family or financial obligations and give where help creates stability rather than dependency.
Relationship: Compassion and affection are strong. Forgiveness can heal, but healthy boundaries are still necessary if an old pattern keeps repeating.
Precaution: Avoid guilt-based giving, emotional overreaction and carrying responsibilities that belong to others.
Make Your Day Better: Care deeply, give wisely and protect the balance between compassion and self-respect.

National Unity Day today

Parivahan Vishesh News

District residents will run today for a united India

October 31st will be celebrated as National Unity Day, the 151st birth anniversary of Iron Man Sardar Vallabhbhai Patel

Sardar Vallabhbhai Patel Jayanti will be celebrated at the district headquarters as well as at the sub-division level in Badli, Beri and Bahadurgarh.

Run for Unity will be flagged off by State Minister for Food, Civil Supplies and Consumer Affairs Rajesh Nagar and Chairman Kaptan Birdhana in Jhajjar, MLA Rajesh June and former MLA Naresh Kaushik in Bahadurgarh, former Minister Om Prakash Dhankhar in Badli and Sanjay Kablana in Beri.

DC Varsha Khanwal held a review meeting

with officials regarding the preparations for the programme.

Jhajjar, October 30

The 151st birth anniversary of Sardar Vallabhbhai Patel, the chief architect of national unity and the Iron Man of India, is being celebrated as National Unity Day. On this occasion, Run for Unity and oath-taking ceremonies will be organized at the district headquarters as well as at the subdivision level in Bahadurgarh, Beri, and Badli. On Friday, DC Varsha Khanwal reviewed the preparations for the program with the officials and gave necessary instructions. The DC said that the Run for Unity will be flagged off from the Maharishi Dayanand Saraswati Stadium at 6:30 a.m. on Saturday by Haryana's Minister of State for Food, Civil Supplies and Consumer Affairs, Rajesh Nagar, in the presence of Zila Parishad Chairman Kaptan Singh Birdhana, administering the oath of unity and showing

the green flag. Former minister Om Prakash Dhankhar will flag off the Run for Unity in Badli, MLA Rajesh June and former MLA Naresh Kaushik in Bahadurgarh, and Sanjay Kablana in Beri. The DC said that on Unity Day, this race will pass through the main roads of Jhajjar city and will conclude back at the stadium. "District residents will run to give the message of national unity." The DC stated that district residents will participate in the Run for Unity to promote the message of national unity. He added that the event, commemorating the ideals of Sardar Patel, aims to foster a spirit of unity, integrity, and patriotism in society. He urged citizens to participate in large numbers to assimilate Sardar Patel's principles into their lives and move toward a healthy lifestyle. This officer was present. On this occasion, ADC Jagnivas, SDM Jhajjar Ravi Meena, CTM Ritu joined the meeting in the Mini Secretariat auditorium and SDM Beri Renuka Nandal, SDM Badli Vishal Kumar joined the meeting virtually.

It is the moral responsibility of all of us to preserve old documents: DC

हरियाणा सरकार

अभिलेख दान अभियान

अभिलेखों से ज्ञान, कल के लिए निर्माण

अभिलेखागार विभाग का प्राथमिक कार्य प्रशासनिक, राजनैतिक, आर्थिक, सामाजिक, धार्मिक एवं सांस्कृतिक महत्व के सरकारी एवं निजी अभिलेखों को प्राप्त करना, उनका प्रबंधन करना और उनका संरक्षण करना है ताकि भावी पीढ़ी के लिए उनकी सुरक्षा सुनिश्चित की जा सके।

इसलिए हम आपसे अपील करते हैं :

- यदि आपके पास ऐसा कोई अभिलेख है तो कृपया उसे हरियाणा राज्य अभिलेखागार को दान करने पर विचार करें ताकि उसे उचित देखभाल के साथ संरक्षित किया जा सके।
- यदि आप ऐसे अभिलेखों को अपने पास रखना चाहते हैं तो हम आपसे अनुरोध करते हैं कि हरियाणा राज्य अभिलेखागार को अवश्य सूचित करें, ताकि विभाग आपको उनके उचित संरक्षण के लिए समय-समय पर निःशुल्क मार्गदर्शन और आवश्यक सहायता प्रदान कर सके।
- सम्मान स्वरूप, अभिलेखागार को अभिलेख दान करने वाले व्यक्तियों के नाम, दान की गई सामग्री के साथ, विविध रूप से स्वीकार किए जाते हैं।

Parivahan Vishesh News

DC Varsha Khanwal appealed to the citizens to donate historical documents, old letters, photographs and important records under the Archives Donation Campaign.

The Archives Department will also provide free guidance on preservation of personal records to those who possess them.

Jhajjar, October 30 .

History lives on not only in books, but also in old documents, letters, photographs, and historical records. These documents, linked to our heritage, are a priceless treasure for future generations. It is our collective responsibility to preserve them and pass them on to future

generations. DC Varsha Khangwal made this appeal to the residents of Jhajjar district, urging them to actively participate in the Haryana State Archives Department's "Records Donation Campaign." DC Varsha Khanwal said that many families and organizations have preserved generations-old historical documents, important letters, rare photographs, government records, and archives related to social, political, and cultural events. These records not only provide evidence of past events but also provide important information about the administrative system, social life, economic activities, religious traditions, and cultural heritage of the time. Proper preservation of such documents can be an important means of connecting future generations to their history. Citizens should

come forward to protect the historical heritage. DC Varsha Khanwal stated that the primary objective of the Haryana Archives Department is to collect, systematically manage, and scientifically preserve government and private records of administrative, political, economic, social, religious, and cultural importance. To this end, the department is conducting a records donation campaign. She appealed to citizens that if they possess any document of historical importance, including old letters, photographs, diaries, government records, or other rare materials, they should consider donating it to the Haryana State Archives so that this valuable heritage can be preserved with proper care. Those who keep records with themselves will also get free assistance. The DC clarified that those who do not wish to donate their historical documents and wish to preserve them can also inform the Archives Department. The department will periodically provide free guidance and necessary assistance for the better maintenance and preservation of such records. Get information from the website and helpline. The Deputy Commissioner stated that for more information regarding the Archives Donation Campaign, citizens can visit the Haryana State Archives Department's website, www.haryanaarchives.gov.in . They can also contact the email archives@hry.nic.in and telephone number 0172-2992112. Apart from this, help can also be obtained from the Deputy Director, Archives Department, Haryana, Irrigation Building, 4th Floor, B-Block, Sector-5, Panchkula (Telephone 0172-2992112) and Assistant Director, Regional Archives, Hisar Division, Room No. 245-46, 2nd Floor, Mini Secretariat, Hisar (Telephone 01662-283190).

SIR-2026 The date for filing voter claims and objections has been extended to November 20: DC

Parivahan Vishesh News

The final voter list will be published on November 30. DC and District Election Officer Varsha Khanwal gave instructions to the officials.

Jhajjar, October 30

The district administration is actively working to ensure that the voter list is error-free, transparent, and reliable under the ongoing special intensive revision process, which is being conducted in accordance with the guidelines of the Election Commission of India. Varsha Khanwal, DC and District Election Officer, has directed the concerned officials that the hearing date for all notices issued under the SIR has now been extended to November 20th. Therefore, this work should be completed by Friday, November 20th, 2026. She said that it is the administration's priority to ensure that no eligible citizen is deprived of enrolling their name in the voter list. DC Varsha Khanwal said that voter list purification is a crucial part of the democratic system. Therefore, all concerned officials should work with utmost seriousness, transparency, and responsibility. Every activity related to the revision should be completed within the stipulated timeframe so that voters do not face any difficulties. Transparency should be maintained in the hearing of notices. The DC stated that hearings on notices issued under the SIR process are ongoing. Officials have been instructed to ensure that hearings on the remaining notices are completed by November 20th. There should be no laxity in delivering notices to the concerned voters, providing them with an opportunity to be heard, and resolving each case in accordance with the rules. He clarified that all cases should be resolved according to the established rules and procedures. Applications in Form-6, 7 and 8 should also be disposed of on time. The DC also directed officials to expedite the processing of Form 6, Form 7, and Form 8 applications received during the SIR, as per the rules. He stated that Form 6 is used for inclusion in the voter list, Form 7 for claims related to deletion, and Form 8 for other prescribed services, including amendments to details recorded in the voter list. These applications should be processed according to the prescribed procedures and timely disposal should be ensured. Claims and objections list being shared with political parties. DC Varsha Khanwal stated that the participation of political parties is crucial to

maintaining transparency in the voter list revision process. To this end, regular meetings are being held at the district's four electoral registration officers and the District Election Officer. Lists of claims and objections are being shared with political party representatives every week to ensure transparency in the process and provide necessary information to all concerned parties. She added that super-checking of claims and objections has also been completed. BLOs are deployed at 807 polling stations across the district. DC Varsha Khanwal stated that a total of 668,832 voters are registered in the draft voter list, which is issued as of July 31, 2026. Booth-level officers (BLOs) have been deployed at all 807 polling stations in the district. Supervisors have also been appointed to oversee their work. The administration is continuously monitoring the revision process so that any problems that arise during the campaign can be resolved in a timely manner. The final voter list will be published on November 30. DC Varsha Khanwal stated that, as directed by the Election Commission of India and the Chief Electoral Officer, Haryana, the final voter list will be published on November 30, 2026. She directed all concerned officials to prioritize the remaining tasks, keeping in mind the set deadline. Furthermore, ensure that all actions related to the voter list comply with the rules. She stated that the objective of SIR-2026 is to ensure that the voter list is updated and reliable. To this end, all officials should work in coordination with each other to ensure that no eligible voter is deprived of their right to vote.

Timely disposal of complaints received on CM Window and Jansamvad Portal is necessary: DC

Parivahan Vishesh News

DC Varsha Khanwal reviewed the complaints received on CM Window, Jan Samvad, SMT Portal in the meeting of officials.

Jhajjar, October 30. In compliance with the instructions of the Chief Minister of the state, Mr. Nayab Singh Saini, regarding public service and good governance, the Jhajjar district administration is laying special emphasis on the quick solution of public problems and effective implementation of government schemes. The administration is trying to ensure that eligible citizens get the benefits of the schemes on time and no citizen has to make unnecessary rounds of government offices to get their problems resolved. This was stated by DC Varsha Khanwal on Friday during a review meeting of officials after a video conference with Additional Chief Secretary Dr. Sumita Mishra. The DC held a meeting with departmental officials in the Mini Secretariat auditorium and conducted a department-wise review of the resolution of complaints received through the CM Window, SMT Solution Camp, and the Jan Samvad Portal. He inquired from the concerned officials about the status of pending cases and directed that, in accordance with the Chief Minister's clear instructions, public problems be resolved on a top priority basis. "Quick and

quality solutions to citizens' problems." DC Varsha Khanwal said that every citizen attending the Samadhan Camp should be listened to seriously and the concerned department should ensure effective action to resolve the complaint. She instructed officials to resolve complaints received at the camps within the stipulated time frame and, where possible, ensure on-the-spot resolution. She said that the objective of the administrative system is to provide simple, easy, and transparent services to citizens. No complaint should be merely resolved formally, but rather, a genuine and quality solution to the complainant's problem should be ensured. "Keep special vigil on complaints on SMT, Jansamvad Portal and CM Window." DC Varsha Khanwal, while reviewing the complaints received on SMT, Jan Samvad Portal and CM Window, directed the officials that the concerned officers should regularly monitor the portal and take timely action on the complaints. She said that unnecessarily pending complaints will be taken seriously. If negligence or unnecessary delay is found in resolving the complaints, the responsibility of the concerned officer will be fixed. She told the officials that the report of disposal of complaints should be updated on the portal on time and the quality of action should also be taken care of in each case. She also appealed to the general public to make maximum use of the mediums provided by the government like Jan Samvad Portal and CM Window. "Here they are." On this occasion, SDM Jhajjar Ravi Meena, DRO Manveer Singh, DDPO Nisha Tanwar, PWD XEN Sumit Kumar and other departmental officers were present.

River and stream water turns poisonous, mining pollution snatches villagers' right to clean water

Parivahan Vishesh News

Water sources in crisis due to iron ore dust and mineral waste, accountability of mining companies and functioning of pollution control system in the dock

Report Dr. Rajkumar Yadav, Parivahan Vishesh Samachar Patra, Koida,

A horrifying picture of development and industrial activities is emerging in the Koida mining area of Sundergarh district, rich in mineral wealth. The changing colour of natural water sources and apprehension of pollution in the water of rivers and streams here is highlighting the seriousness of the local environmental crisis. Water sources which once quenched the thirst of villagers and were the basis of daily needs are now seen losing their natural identity.

According to local conditions and the pictures that have come to light, reddish water is visible in the Karo, Suna and nearby water flows of the area. It is apprehended that dust, soil, mineral waste emanating from iron ore mining and their uncontrolled flow have polluted natural water sources. This is not just a matter of change in colour of water, but a question linked to the life and livelihood of those rural families whose dependence is on these

Scholars of English literature from across the country to gather in Bodh Gaya from November 26, 69th National Conference to be organized

Parivahan Vishesh News

Registration of more than 300 participants, deliberation on literature, language, culture and social change

Bodh Gaya. Preparations are in full swing for the 69th All India English Teachers Conference under the aegis of Association for English Studies of India (AESI) by the Department of English and Research Centre, Magadh University, Bodh Gaya. The three-day national conference will be organized from 26 to 28 November. Its theme has been kept as 'Narratives of Change: Exploring Literature, Language and Society'. Teachers, researchers and academicians from universities, colleges and research institutions across the country will participate in the conference. So far more than 300 participants have registered. The conference will discuss topics like English language teaching, translation, Indian

very water sources.

The irony is that the mineral wealth which gives momentum to government revenue, industrial business and economic activities, the price of its exploitation has to be paid by the local population in the form of loss of their environment and natural resources. If women and children have to struggle for clean water, then it cannot be called an achievement of development. The biggest question is on the environmental accountability of mining companies and the monitoring system of the concerned departments. To what extent are the Pollution Control Board, Mines Department, District Administration and local bodies actually discharging their responsibilities?

It is necessary that immediate scientific testing of the water of the affected water sources be done, the actual sources of pollution be identified and strict action be taken against the guilty units.

Exploitation of mineral wealth can enrich the economy of the state, but its price cannot be paid with the destruction of villagers' health, clean drinking water and natural heritage. The real meaning of development will be meaningful only when people living around the mines also get clean air and safe water.

Sand overloading dispute takes violent turn, bloody clash at sand ghat

Parivahan Vishesh News

Murderous attack on contractor and employees, accused of threatening to kill by showing gun; employee's head smashed with sharp weapon, attackers had come in four vehicles

Report Dr. Rajkumar Yadav, Parivahan Vishesh Samachar Patra,

Biramitrapur,

In Sundargarh district, disputes over dominance at sand ghats, illegal activities and sand loading are

now starting to take a violent form. In Kuarmunda area, such a serious incident came to light late Wednesday night at a sand ghat of Shankh river over overloading, where allegedly more than 15 people attacked the contractor of the sand ghat and the employees working there. During this, there is an allegation of threatening to kill by showing a gun and inflicting a life-threatening blow on an employee's head with a sharp weapon. According to information received, sand loading work was going on at the ghat under the supervision of sand ghat contractor Phanibhushan Kisan. During this, a dispute arose over overloading. It is alleged that late Wednesday night, more than 15 people reached the sand ghat in four vehicles. Targeting employee Rakhu Hansda present there, the attackers attacked his head with a sharp weapon. He was seriously injured in the attack. It is also alleged that the

attackers took out a gun and intimidated the contractor and the employees working there and threatened to kill them if they resisted. During the incident, there was a fierce dispute and scuffle between both sides. This sudden attack created an atmosphere of chaos at the sand ghat. After the incident, a written complaint has been lodged at the concerned police station by the contractor of the sand ghat. Police have started investigation of the case on the basis of the complaint. The big question is, how effective is the writ of law at the sand ghats? If disputes related to overloading or contracting are resolved with weapons and muscle power, then this raises serious questions not only on law and order but also on the transparency of the mineral transportation system. Now all eyes are on the police investigation and action against the accused.

Land mafia eyes government land in South Rourkela, serious questions raised on administrative monitoring

Parivahan Vishesh News

Attempt to encroach valuable government land at Rangoli Chowk; preparation to level 20 dismil land and build boundary, functioning of Revenue Department and role of local RI under scanner

Report Dr. Rajkumar Yadav, Parivahan Vishesh Samachar Patra, Rourkela

The matter of attempt to illegally encroach government land in South Rourkela is no longer limited to just the high-handedness of the land mafia, but it has also raised serious questions on the functioning and monitoring system of the local revenue administration. A case has come to light of an alleged conspiracy to first level about 20 dismil of valuable government land adjacent to the Shiva Temple located at Rangoli Chowk and then encroach upon it by constructing a boundary. Surprisingly, such activities on government land do not happen suddenly. Activities like identification of land, demarcation, earth filling and preparation for construction go on for a long time. In such a situation, at what level the monitoring system of the local Revenue Inspector (RI) and concerned departmental employees was

active, is itself a big question. Did the administration not get wind of it or deliberately turned a blind eye till the complaint came to light? An impartial investigation into the alleged collusion of government employees at the local level or apprehensions of protection being given to land mafias is necessary. However, the involvement of any employee is not yet proven, but without fixing administrative accountability, effective prevention of such cases is not possible. On getting information about the matter, Tahsildar Salma Majhi had sent Revenue Inspector Gautam Oram to the spot and directed him to investigate. In the investigation, the concerned land has been confirmed to be government land. Members of Jagran Manch and local villagers also united and opposed the illegal encroachment. Now the question is whether the action against those trying to encroach government land will remain limited to only investigation and assurance or will the encroachment actually be removed and legal action be taken against the culprits? This is a test of accountability for the administration. Protection of government property is not just a paper responsibility, but a constitutional and administrative duty of revenue officers. Therefore, a high-level inquiry into the whole matter, scrutiny of concerned revenue records and fixing accountability of officers and employees who were negligent in duty is necessary.

Rubio's Visit: Now Big Businessmen Entrusted with Policy-Making

Parivahan Vishesh News

(Article: Savera, Translation: Sanjay Parate)

Last week, some bizarre events took place, which indicate the serious and dangerous direction in which India is heading. US Secretary of State Marco Rubio landed in Mumbai, held a flurry of meetings and left for Jamnagar, "to meet the Reliance people", as US Ambassador to India Sergio Gor said. Rubio completely skipped the visit to New Delhi and described this tour as 'trade-focused'. In Mumbai, Rubio had a formal meeting with his Indian counterpart, S. Jaishankar, where they allegedly discussed "trade, defence, technology and energy security". In other words, it was a formality, which had no special importance. Rubio also met Gautam Adani and Tata Group Chairman N. Chandrasekaran. During this same visit, a photo of Indian Petroleum Minister Hardeep Puri went viral on social media, in which he was seen conversing with late convicted child rapist, sex trafficker and power broker Jeffrey Epstein. This picture is not new – it was released in January 2026 by the US Department of Justice as part of the 'Epstein Files'. In it, both were shown sitting in a room-like place, where no one else was present – this was exactly opposite to the laborious clarification given by Puri earlier this year, in which he said that he had met Epstein only with a delegation. The strange thing was that it resurfaced on a large scale again, exactly at the time when Rubio went to meet Ambani, owner of the world's largest oil refinery in Jamnagar, and it was being told that they were going to talk about supplying diesel to America and refining Venezuelan crude oil in Jamnagar. These are topics that the Petroleum Minister should normally pay attention to. But recently Puri seems to have disappeared. Clearly, someone was trying to blackmail the Indian government by resharing the picture of that shameful meeting. Before understanding the real meaning of these events and their backgrounds, it needs to be noted that it appears that Modi is being marginalized in his own country, because global elites and American officials are directly contacting local big business houses. In fact, Rubio announced that the US-India Free Trade Agreement is almost finalized – which is a matter of concern for the Indian government – but the Ministry of External Affairs only mentioned 'progress'. Either Modi does not care, or more likely, these power brokers do not care. Whatever the situation, it is a dangerous trend, which is handing over the country's policy-making process and interests to corporate monopolists. This is evident from the fact that there has been no comment from the top levels of power on all these activities. The sarcastic post by tech-giant billionaire Musk on X, in which he addressed Mukesh Ambani as Prime Minister and called him "the real boss of India", has some truth in it. What was really happening during Rubio's visit? Let us try to find out. India-US Trade Deal Our readers will remember that the India-US bilateral trade agreement is apparently stalled, although claims of progress in talks are made from time to time. In an interview, Rubio said that both countries were "very close" to an agreement, and also added that, "...I think we are not months, but only weeks away from finalizing it. I think 99 percent of the work is done... I am feeling extremely positive about its progress." Earlier in June, Sergio Gor said almost the same thing, explaining that India wants tariffs on its exports to the US to be reduced compared to competitors. Earlier this year in February, both sides announced a framework agreement amidst much celebration. Its objective was to lay the foundation for further discussions and finalizing the agreement. Important concessions were given from India's side, including commitment to import goods worth 500 million dollars from the United States in five years, besides taking steps towards "eliminating or reducing tariffs on all American industrial goods and a wide range of American food and agricultural products". The details of this surrender have been given in old issues of Loklahar. Apart from the issues of negotiation, the Modi government is facing heavy and aggressive opposition to this deal from farmers, trade

unions and left parties, because it will cause massive devastation in agriculture as well as industries, especially in the MSME sector. Rubio was trying to end this deadlock by uniting India's big enterprises, so that they could help in finalizing this agreement. This is why obstacles in the way of the agreement were not given importance and assurances of investment opportunities in America were given. They know that Modi's weak condition in the country and his government's complete surrender before big enterprises can be used to get a beneficial deal for America. Note that he took advantage of this opportunity to emphasize on import of "American technology and systems", which is a euphemism for relatively weapons. Rubio was casting nets far and wide to catch as many fish as possible. On their part, these giants did not care at all about farmers and workers. They stood in support of those three farm laws, which would have corporatized agriculture, but the Modi government had to bow down before the brave resistance of farmers. These giants have also been advocates of labour reforms, who have welcomed those four codes, which bring workers to a slave-like condition. Therefore, there is a high possibility that Ambani and others will leave no stone unturned in presenting America's case before the government. Oil Deals Rubio's visit to Jamnagar regarding oil and its products had several objectives. One immediate and most urgent objective was to persuade Ambani to increase diesel exports for America, where retail diesel prices have increased by up to 77 percent in the last one year. This is a major factor increasing the cost of living, which is the single biggest issue in the upcoming US Congressional midterm elections. According to opinion polls, the Republicans led by Trump are lagging far behind, and in a Reuters/Ipsos poll, Trump's popularity rate is said to be only 31 percent. Therefore, increasing the supply of diesel in the markets can calm discontent to some extent. Reliance's Jamnagar refinery is one of the world's largest producers of diesel. According to media reports, it exported 2.166 crore tonnes of refined petroleum products in the first half of 2025. Out of this, diesel had the largest share with 98.1 lakh tonnes, followed by 61.4 lakh tonnes of petrol and 20.6 lakh tonnes of jet fuel. According to data quoted by Finnish think tank CREA, Reliance exported oil products worth 14.3 crore dollars to America in September 2026. To facilitate Reliance's oil products export to America, Trump has recently relaxed the 100 percent tariff imposed on those suppliers using Russian crude oil, which was made into law by the US Congress only last month. By 2025, the share of Russian crude oil in Reliance's imports had reached almost 50 percent, but after strict US sanctions, a decline was recorded in it. In fact, Trump has now signed an agreement with Russia itself to allow import of diesel. All this is because of the impending midterm elections. But this story of oil does not end here. Groups led by giants like Ambani and Adani are looking for profits abroad, while they are refusing to invest more in India, because profits here are very low. Therefore, Rubio also confirmed the previous deal related to Reliance's investment of up to 300 billion dollars in a Texas oil refinery and its product purchase arrangement. Also note that after the bribery charges against Adani were dismissed, he recently promised an investment of 10 billion dollars in America. Epstein Controversy However, at a time when Hardeep Puri could have been involved in the Rubio-Ambani talks, the resurfacing of Puri-Epstein pictures in the media points to attempts to take advantage by damaging Puri's (and the Indian government's) reputation. But more important than this is how and why the Modi government has allowed a minister who was clearly involved with a sex offender to remain in his post for so many months. His name is not included in the list of Rajya Sabha candidates recently announced by BJP. Therefore, he will possibly be removed from office. But allowing him to remain in office even during such a sensitive period when the whole world was struggling with an oil crisis after the US-Israel invasion of Iran in February is not only an unjust act, but it created the danger of exactly the same kind of blackmailing that is being attempted today. After all, at least sixteen public figures in ten countries have had to resign from public office (or have been removed) or are facing criminal investigation due to their relations with Epstein, while hundreds of others are facing uncertainty, because they are mentioned somewhere in those thirty lakh documents. Can Modi Handle All This? Prime Minister Modi has been claiming that he and his party believe in 'India First'; that they are true nationalists; that they can be 'Vishwa Guru' (teacher of the world); that they are the most efficient and most people-centric – in short, the best. However, handing over important economic decisions to billionaires, bowing down before troublemakers like Trump and corrupt lunatics like Netanyahu, becoming supplicants of big enterprises and global elites, all these are signs that – unfortunately – our government is not working in the interest of the common people. Its economic policies will re-colonize the country, while its socio-cultural ideology is pushing India into the darkness of medieval times. Modi cannot handle the modern world, and there is a need to save India today from him and BJP/RSS. (Author is a research scholar. Dr Vijay Garg

Retired Principal Educational columnist Eminent Educationist street kour Chand MHR Malout Punjab

Parivahan Vishesh News

Dr. Vijay Garg

The identity of Punjab’s villages has never rested solely on their fields, traditional homes, and green crops. It has also been rooted in the love, brotherhood, and community spirit of their people. In villages, a wedding was not merely the union of two individuals or two families; it was an occasion of collective joy, enthusiasm, and togetherness for the entire village. However, changing times have transformed wedding traditions. Today, the glitter of marriage palaces, expensive decorations, and the growing culture of extravagance have significantly affected the community spirit that Punjab once cherished. When a Wedding Was a Celebration for the Entire Village In earlier times, village weddings had a charm of their own. Preparations began several days in advance, filling homes with excitement and activity. Neighbours, relatives, and other villagers would arrive to help without waiting for a formal invitation. Some brought provisions, others arranged utensils and bedding, while many helped prepare food and serve guests. Women gathered to sing traditional folk songs, including

Changing Wedding Traditions and the Decline of Village Community Bonds How Marriage Palaces Have Stolen the Charm of Village Life

Changing Wedding Traditions and the Decline of Village Community Bonds - How Marriage Palaces Have Stolen the Charm of Village Life

Parivahan Vishesh News | Dr. Vijay Garg | Retired Principal, Eminent Scientist, Malout Punjab

TRADITIONAL VILLAGE WEDDING

Community cooking, dhol and folk singing under warm lantern-lit village courtyard

MODERN MARRIAGE PALACE

Luxurious lit-up marriage palace at night with cars and grand encrance

Dr Vijay Garg • Retired Principal, Eminent Scientist • Malout Punjab -152107

suhag and ghoriyan. The laughter of children, the advice of elders, and the enthusiasm of young people brought life to the village courtyard. From cooking meals to welcoming guests, everyone participated in the arrangements. These occasions were not merely about sharing responsibilities; they strengthened affection, trust, and a sense of belonging. A wedding was not the responsibility of one family alone. It was a shared celebration for the entire village. The Growing Popularity of Marriage Palaces Today, marriage palaces have become an important part of wedding celebrations. Beautiful decorations, dazzling lights, air-conditioned halls, elaborate menus, and professional arrangements offer convenience to families. Such venues can make it easier to accommodate large numbers of guests. Therefore, the trend of holding weddings in marriage palaces cannot be considered entirely negative. The problem arises when the success of a wedding is measured by the

number of guests, the variety of dishes, the cost of decorations, and the grandeur of the venue. The genuine happiness of the occasion and the warmth of relationships sometimes disappear behind a display of wealth and extravagance. Earlier, villagers actively participated in wedding preparations. Today, many responsibilities are handed over to contractors, caterers, and event-management companies. Although this can make arrangements more efficient, it may reduce opportunities for people to work together, spend time with one another, and strengthen community relationships. Declining Togetherness and Growing Formality In the past, participation in village weddings was itself an expression of social bonding. When a family celebrated a wedding, villagers often considered it their own occasion of happiness. Today, many weddings are limited to selected guests, formal invitations, and tightly scheduled programmes. Guests arrive at

marriage palaces, eat, take photographs, and leave. Sometimes, even close relatives of the bride and groom hardly find enough time to interact meaningfully with everyone present. What was once an opportunity for social interaction can become a formal event. This change is not equally visible in every family or village, but it raises an important question: Are we making weddings more glamorous while gradually losing their soul? The Race for Showmanship and the Financial Burden The growing culture of extravagance places considerable financial pressure on families. Expensive venues, elaborate decorations, multiple food counters, photography, and other arrangements can cost far more than a family's income comfortably allows. Some families feel compelled to spend beyond their means because of social competition or the expectations of relatives. In this race, simplicity and genuine happiness often take a back seat. Money that could have been

saved for children's education, healthcare, employment, or future security is sometimes spent on a few hours of display. The dignity of a wedding should not be measured by its cost. It should be reflected in the strength of relationships, the happiness of families, and the beautiful beginning of a new life. Traditional Culture Is Also Being Affected The soul of Punjabi weddings has always lived in folk songs, customs, humour, and shared memories. Traditional suhag and ghoriyan, giddha, boliyan, and other rituals have helped pass Punjabi culture from one generation to the next. Today, DJs, loud music, and programmes designed primarily for photographs and videos have become prominent at many weddings. Modern music and new customs are not inherently wrong. However, if traditional practices are completely sidelined, future generations may gradually become disconnected from their cultural heritage. Preserving culture does not mean returning to the past. It means keeping our roots alive while adapting to the changing times. Can the Old Community Spirit Be Revived? The answer is yes. There is no need to abandon marriage palaces or oppose modern facilities. What matters is ensuring that convenience does not replace community participation and human connection. - Give priority to simplicity: Avoid unnecessary expenditure and excessive showmanship at weddings.- Involve village communities: Encourage neighbours, friends, and relatives to participate in wedding preparations.- Preserve folk traditions: Make room for

suhag, ghoriyan, giddha, and traditional Punjabi boliyan.- Keep the spirit of shared meals alive: Hospitality should mean more than serving food; it should also involve sitting together and spending meaningful time with guests.- Connect the younger generation with heritage: Tell children about traditional village weddings and the social values behind their customs. Village panchayats, social organisations, and young people can also encourage simple weddings and community celebrations. Such efforts can help preserve the values of cooperation, equality, and mutual respect. Conclusion: Relationships Matter More Than Palaces Marriage palaces may be a product of changing lifestyles and modern needs, but they cannot replace village solidarity, mutual cooperation, and meaningful human relationships. The grandeur of buildings may attract attention for a few hours, but the warmth of people's affection can remain in our hearts for a lifetime. We must understand that the real happiness of a wedding does not lie in expensive venues, elaborate decorations, or the number of dishes served. It lies in the love that unites two families and brings the wider community closer. The true charm of Punjab will return when the glitter of marriage palaces is accompanied by the warmth of village courtyards, the affection of neighbours, and the laughter of people celebrating together.

Science in the Fields: How Genetic Advances Are Strengthening Indian Crops

Parivahan Vishesh News

Dr. Vijay Garg

Agriculture has always been the backbone of India's economy, providing food, employment and livelihoods to millions of people. However, Indian farmers face growing challenges, including climate change, water scarcity, soil degradation, crop diseases and unpredictable weather. Traditional farming practices alone may not be sufficient to address these emerging problems. Scientific advances in genetics are therefore opening new possibilities for developing stronger, more productive and climate-resilient crops. Modern genetic tools are helping researchers understand the hereditary characteristics of plants and identify the genes responsible for desirable traits. By combining traditional agricultural knowledge with advanced biotechnology, India can strengthen its food security while making farming more sustainable. ### Understanding the Genetic Revolution Every crop possesses a genetic blueprint that determines its growth, yield, maturity, nutritional qualities and resistance to diseases. Scientists study this blueprint to identify genes associated with beneficial characteristics. Conventional plant breeding has improved Indian crops for decades through the careful selection and crossing of plants. Modern technologies, including molecular markers, genome sequencing and gene editing, have made this process more precise and efficient. Molecular markers help breeders identify plants carrying desirable genetic traits without waiting for those traits to become fully visible. Genome sequencing provides detailed information about a plant's genetic structure, while gene-editing techniques such as CRISPR can make targeted changes to DNA. These technologies are

not interchangeable, and each has different applications, costs and regulatory requirements. Nevertheless, together they are expanding the possibilities for crop improvement. ### Developing Crops That Can Withstand Climate Change Climate change is one of the greatest threats to agricultural productivity. Rising temperatures, irregular rainfall, floods and prolonged droughts can damage crops and reduce farmers' incomes. Genetic research can help develop varieties that tolerate heat, use water more efficiently and withstand periods of limited rainfall. For a country where millions of farmers depend on monsoon rains, such improvements are particularly important. In rice, researchers are investigating genetic traits associated with drought tolerance, flood survival and improved nutrient use. India's experience with the flood-tolerant rice variety Swarna-Sub1 demonstrates how scientific breeding can help farmers recover from temporary submergence. Similarly, wheat breeders are working to develop varieties that maintain productivity under higher temperatures. Heat tolerance is especially important because rising temperatures during grain formation can reduce wheat yields. These innovations can reduce agricultural vulnerability, although their effectiveness depends on local conditions, farming practices and the severity of climate stresses. ### Protecting Crops from Pests and Diseases Crop pests and diseases cause substantial agricultural losses. Excessive dependence on chemical pesticides can increase production costs, harm beneficial organisms and contribute to environmental pollution. Genetic approaches can help develop crops with improved resistance to particular insects, fungi, bacteria and viruses. Scientists identify naturally occurring resistance genes and incorporate them into improved varieties through breeding. In

some cases, genetic engineering or gene editing may offer additional possibilities. For example, resistance to specific plant diseases can reduce the need for repeated chemical treatments. This can benefit farmers economically while supporting environmentally responsible agriculture. However, resistant varieties must be carefully evaluated because pests and pathogens can evolve over time. Crop diversity, integrated pest management and regular scientific monitoring remain essential. ### Improving Nutrition and Productivity Genetic advances are not limited to increasing crop yields. They can also improve the nutritional quality of food. Biofortification aims to increase the concentration or availability of essential nutrients in edible crops. India's iron-rich pearl millet varieties illustrate how plant breeding can contribute to better nutrition. Researchers are also exploring ways to improve the nutritional qualities of rice, wheat and other staple foods. At the same time, scientists seek to improve grain quality, shorten crop maturity periods and increase the efficiency with which plants absorb nutrients from the soil. Higher productivity on existing farmland can help meet the food needs of a growing population while potentially reducing pressure to convert forests and other natural habitats into agricultural land. However, increased yields must be supported by responsible water, soil and nutrient management. ### Challenges and Responsibilities Despite their promise, genetic technologies are not a universal solution. Developing improved varieties requires substantial investment, skilled researchers, long-term field trials and cooperation between agricultural universities, research institutions and farmers. New varieties must be tested under different environmental conditions to ensure that they perform reliably. Their safety, ecological effects and

suitability for local farming systems must also be assessed. The regulatory framework is particularly important for genetically engineered and gene-edited crops, whose requirements may differ according to the technology used and the applicable rules. Small and marginal farmers must have affordable access to quality seeds. Scientific progress will have limited impact if improved varieties remain inaccessible to those who need them most. Farmers should also be informed about the benefits and limitations of new varieties through demonstrations, agricultural extension services and practical training. ### Conclusion Genetic advances are creating new opportunities to strengthen Indian agriculture. From drought-tolerant rice and heat-resilient wheat to disease-resistant crops and nutrient-rich grains, science is helping researchers address some of the country's most pressing agricultural challenges. The future of farming will depend not on genetics alone but on the integration of improved seeds, traditional knowledge, efficient irrigation, healthy soils, biodiversity and informed farming decisions. India must continue investing in agricultural research while ensuring that scientific innovations reach farmers fairly and responsibly. When laboratories collaborate with fields and researchers work closely with farming communities, genetic science can become a powerful instrument for food security, environmental sustainability and rural prosperity. The green revolution transformed India's agricultural landscape. A new era of science-driven farming could make its crops stronger, its farmers more resilient and its food systems better prepared for the challenges of the future.

Run for Unity Marathon on 31st

Focus on development works

Parivahan Vishesh News

Khunti. On the occasion of Sardar Vallabhbhai Patel Jayanti, 'Run for Unity Marathon' will be organized on 31st October at 7 am from Birsa Munda Football Stadium, Khunti. A meeting of the District Sports and Tourism Committee was held in the office chamber located at the Collectorate under the chairmanship of Deputy Commissioner Md. Javed Hussain. In the meeting, progress of under-construction and operational schemes related to sports and tourism in the district was reviewed and necessary guidelines were given. In the tourism sector, review of works related to repairing, brick work, pathway, shed, toilet, canteen building, entrance gate etc. at Panchghagh tourist spot was done. The Deputy Commissioner directed to install signage boards at various places and declare the area as a No Plastic Zone, so that the area can be kept clean. While reviewing the renovation work going on at the birthplace of Lord Birsa Munda at Ulihatu, instructions were given to ensure all development works with quality and on time. During review of ongoing works at Perwaghagh tourist spot, the concerned Executive Engineer informed that almost the work has been completed, the Deputy

Commissioner directed to complete the remaining work soon as well. Instructions were given to complete all documents and start work for development works like pathway, railing, light etc. at Dombari Buru. In the meeting, the Deputy Commissioner, looking at the possibilities of trekking at tourist

places of the district, directed to identify suitable trekking routes and develop them as per requirement, so that tourism activities can be further promoted. During review of sports sector, the Deputy Commissioner gave instructions regarding organizing sports competition in all schools under Khunti Khel Mahotsav. While

reviewing the under-construction stadium works at Rania and others, instructions were given to complete all works soon. The Deputy Commissioner has appealed to the residents of the district to participate in the 'Run for Unity Marathon'.

SSB personnel organized a 10-kilometer bicycle rally on National Unity Day.

Parivahan Vishesh News

citizens and to promote the importance

The Fit India Movement promoted a healthy lifestyle, environmental protection, and a pollution-free environment.

Narkatiyaganj. On the occasion of Sardar Vallabhbhai Patel's birth anniversary and National Unity Day, the 44th Battalion of the Sashastra Seema Bal (SSB), Narkatiaganj, organized a 10-kilometer bicycle rally as part of the Fit India Movement on Friday. Organized under the able guidance of Battalion Commandant Balwant Singh Negi, the rally commenced at the battalion headquarters. The bicycle rally began at the battalion headquarters and reached Shaheed Chowk in Narkatiaganj. It concluded by returning to the battalion headquarters. The personnel participated enthusiastically, covering a distance of approximately 10 kilometers. Through the rally, the personnel encouraged citizens to incorporate regular exercise, cycling, and physical activity into their daily lives. The primary objective of the program was to increase awareness about physical health among soldiers and

of adopting a healthy lifestyle. Cycling was also encouraged to create awareness about environmental protection and a pollution-free environment. On this occasion, Sardar Vallabhbhai Patel's incomparable contribution to nation-building, national unity, and integrity was remembered. A pledge was taken to follow his ideals and maintain the nation's unity and integrity. This initiative by the 44th Battalion SSB conveyed the message that everyone can maintain their health through regular physical exercise and a healthy lifestyle. Healthy citizens play a vital role in building a strong society and a strong nation.

Foundation stone laying of PCC road

Parivahan Vishesh News

Khunti. The foundation stone for construction of 450 feet PCC road from Tapkara Lowajimi Main Road to Habel Gudiya via Johan Gudiya's house in the district was formally laid, worship was performed by Pahan Dhani Gudiya. On the occasion, District Council Chairman Masih Gudiya said cooperation of rural common people in development work is very essential, without it it is incomplete. On the occasion, Hon'ble District Council Chairman Masih Gudiya, Fatka Panchayat Mukhiya Pushpa Gudiya, Deputy Mukhiya Arfa Gudiya, Vimal

Gudiya, Anil Gudiya, Sohrai Pahan, Gudiya Padha Raja Habel Gudiya, Iliyas Gudiya, Elizabeth Barla, Ravi Gudiya, Sukhram Gudiya and other villagers were present.

The Shadow of Foreign Regime Change over World's Democracies!

**Parivahan Vishesh Samachar Patra**
दैनिक / Parivahan Vishesh Daily (RNI approved)

October 2026

Chief Editor: Sanjay Kumar Bathla | Co Editor: Pinki Kundu

Shadow of Foreign Regime Change over World's Democracies!

From Israel to India, France, Spain and Albania - Global web of regime change?

1. ISRAEL

27 Oct 2026 Election

- 120 seats, majority 61 | Netanyahu 53, Arab 19 decisive
- Foreign funding allegation: Qatar, Turkey
- Probe: Shin Bet

2. FRANCE

Education protest to anti-inflation

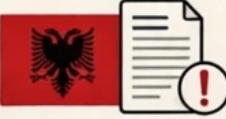

- 3 lakh protesters on streets
- Fox News: 50 organizations active
- Protest against inflation & cost of living

3. SPAIN

Housing crisis & eviction

- 87-year-old woman's eviction in discussion
- Election scheduled: 29 Nov 2026
- Public anger over housing inequality

4. ALBANIA

Corruption & investment protest

- Protest against Kushner project
- Anti-corruption groups agitation
- Demand for transparency on foreign investment

5. INDIA

SIR voter list protest

- Protest over voter list SIR
- Progressive International: 101 organizations involved
- Questions on democratic process

6. How does Regime Change work?

- Economic discontent - inflation, unemployment as issue
- Mass movement - protest, civil society activism
- Digital propaganda - social media, disinformation campaign
- Foreign funding - influence through NGO/media
- Diplomatic pressure - international statements & pressure

Analytical Report | Special on Global Democracy & Interference Pattern

Author: Advocate Kishan Sanmukdas Bhavnani, Gondia

Source: Public reports, October 2026 | For informational/analytical presentation only

Parivahan Vishesh News

Serious questions raised from Israel's elections to India, France, Spain and Albania - Apprehension of regime change through foreign funding, vote theft, public anger and political network? Who is laying the global trap?

Author: Advocate Kishan Sanmukdas Bhavnani, Gondia Maharashtra, Parivahan Vishesh News Paper

Lead: The biggest question in global politics today - are mass movements only the result of real problems of the people or behind them a planned strategy of regime change is working through foreign money, digital propaganda and political network? Israel's election of 27 October 2026 has refreshed

this debate.

Main Points:

1. Israel Election - Mathematics of 120 seats and rise of 19 Arab seats:- 61 seats needed for majority in 120-member Knesset- Netanyahu-supported alliance gets 53 seats, pro-change opposition (Eisenkot) 48 seats, Arab parties record 19 seats- Party-wise: Likud 27, Yashar 21, BiYachad 12, Joint Arab List 11, Democrats 8, Ra'am 8, Yisrael Beiteinu 7, Otzma Yehudit 7, United Torah 7, Shas 6, Religious Zionism 6- Voting 77.9% - 57 lakh voters- Arab parties in kingmaker role

2. Allegations of foreign interference - Facts under investigation:- Netanyahu and Likud's allegation - distribution of money among Arab voters, vote buying, double voting- Suspicion in media about

money from Qatar and Turkey's role- Supreme Court Judge Noam Sohlberg directed Shin Bet to investigate- Important: Qatar and Turkey rejected allegations, Election Committee described widespread rigging as baseless - allegations still under investigation, not proven

3. France - From education to anti-inflation:- Student movement in late September 2026 against shortage of teachers and facilities- 3 lakh protesters in cities including Paris in October- Fox News Digital 9 October report - 50 organizations (15 student/youth + trade unions, left parties, media) active - but organizational link is not proof of conspiracy

4. Spain - From housing crisis to elections:

- Eviction of 87-year-old Maricarmen Abascal in Madrid became symbol- Demand for rent control and affordable housing - Prime Minister Pedro Sanchez called for mid-term elections on 29 November

5. Albania - Corruption and foreign investment dispute:- Luxury project near protected wetland in Zvernec - discussion of investment linked to Jared Kushner - Movement on corruption, unemployment, education

6. India - Debate on SIR and discussion of international network:- Protest on Special Intensive Revision (SIR) of voter list, questions on deletion of names - Demonstration in Delhi demanding resignation of Chief Election Commissioner - India, France, Spain, Albania movements mentioned together in Progressive International 16 October briefing- Fox News 21 October report - network of 101 organizations from 9 countries, discussion of Neville Roy Singham funding - but supporting and conspiracy to topple government are not same

7. How regime change works - 6 mediums:
1. Economic discontent - inflation, unemployment, expensive housing
2. Organized mass movement - students, workers, social organizations
3. Digital propaganda - social media, video, international media
4. Economic/political support - foreign grants, contacts
5. Diplomatic pressure - sanctions, questions on legitimacy
6. Political alliance - use of strategy and internal discontent

Note: Civil organizations, independent media, peaceful demonstration are legitimate. Problem is when there are efforts of secret foreign money, illegal financing, disinformation, cyber interference and weakening institutions. Investigation should be through banking records, financial transactions and independent evidence.

Editorial Comment: In democracy, demonstration is a right, but when questions arise on national sovereignty, distinction between fact and rumour is necessary.

BJP District Minister Sunil Pehalwan's graph rising due to selfless active participation in the party

Parivahan Vishesh News

people has increased rapidly. Especially in Ambedkar Nagar Assembly, in a very short time, he has established a cordial relationship with the masses due to his affable nature, hard work and dedication. In BJP, he actively participates in all activities from national level to district and mandal level. On the occasion of Navratri, he participated as a guest and chief guest in programs of many religious organizations. In the past few days, on Valmiki Jayanti, he was invited as a guest in Valmiki Janmotsav organized by many organizations. In the Valmiki Jayanti program organized in Dakshinpuri, Ambedkar Nagar, Sunil Pehalwan was present as the chief guest and inaugurated the program by cutting the ribbon.

Swatantra Singh Bhullar, New Delhi

Parivahan Vishesh News Paper Daily

New Delhi. When a person is fully aware and dedicated towards his responsibilities, then no obstacle can stop him from reaching his goal. Mehrauli District BJP's current District Minister Sunil Pehalwan has dedicated most of his time to active participation in BJP activities and social service. As a result, in a very short time, the party gave him the responsibility of District Minister. Due to his strong participation in all social and religious activities of South Delhi Parliamentary Constituency, his popularity among the
